Health and Wellbeing Better Care Fund Metrics

1: Total non-elective admissions in to hospital (general and acute)

**Definition:** The total number of emergency admissions for people of all ages where an acute condition was the primary diagnosis, that would not usually require hospital admission.

**Frequency / Reporting Basis:** Monthly / Cumulative within quarter only  
**Source:** MAR data (Monthly NHS England published hospital episode statistics)

**Observations from the data:**

The BCF plan committed CCGs to a 2.7% reduction in the HWB Plan figures in each quarter of the year. During July and August, there was a 0.6% reduction in non-elective admissions, so this measure has been marked as improving but not achieved. A total of 70 non-elective admissions have been saved so far in the quarter, which is 265 less than target, but an improvement nonetheless. The estimate for the 3 months of Quarter 2 is 18,583 admissions, which is better than the HWB Planned figure of 18,688, but 398 admissions short of the NEA plan after the reduction from NHSE, which is 18,185. Only the South CCG have consistently experienced monthly admission rates lower than the HWB Planned reduction, so far saving 111 admissions in the area this quarter; a 4.4% reduction. The East have also seen an improvement in admissions, albeit with a more modest 1.9% reduction which is just below the 2.7% target. All other CCGs in the county have shown an increase in admissions, with the South West CCG making 63 more admissions than planned; a 3.5% increase.

**2: Admissions to residential / nursing care homes - aged 65+ per 100,000 population (ASCOF 2A part ii)**

**Definition:** The total number of admissions to permanent residential or nursing care during the year (excluding transfers between homes unless the type of care has changed from temporary to permanent)  
**Frequency / Reporting Basis:** Monthly / Cumulative YTD

**Source:** AIS data: Local Adult Care Monitoring (LTC admissions report & SALT return)

**Note:** Figure reported cumulatively, so monthly figures show increases in placements recorded & not necessarily within that month

**Observations from the data:**

In the year to the end of August, the total number of permanent admissions to care homes for older people is 536. This is 127 admissions more than planned at this point in the year. This equates to just over 100 care home placements per month, so the year end estimate is 1,286, which would be 30% higher than planned (982). Over 60% of the people admitted to permanent residential care were previously in short term care for an extended period. Part of this will have been the increase in utilisation of short term care as a discharge path for patients in hospital, which of course is not a permanent solution and ultimately leads to an increase in permanent placements. The data is being processed for September, but early indications point to an improving position with fewer admissions.

**3: % people (65+) at home 91 days after discharge from hospital into Reablement/rehabilitation (ASCOF 2B part 1)**

**Definition:** The percentage of older people (within a 3 month sample period) discharged from an acute or non-acute hospital to their own home/residential or nursing care home/ extra care housing for rehabilitation, where the person is at home 91 days after their date of discharge from hospital.

**Frequency / Reporting Basis:** 6-monthly / Cumulative for sample period

**Source:** Reablement/ILT - external service provider, rehabilitation - LCHS

**Observations from the data:**

This is an annual measure taken from the Adult Care Short And Long Term (SALT) return. However, the intention is the calculate a mid-year position looking at April to June discharges into Reablement services, which will be reported at the end of September. Part 2 of this ASCOF measure has been chosen as the local performance measure, so both the effectiveness (part 1) and the offer rate (part 2) will be monitored in the BCF in 2016/17. The data from intermeidate care providers for the mid-year position is currently being processed, and will be available for quarter end reporting.

4: Delayed transfers of care (delayed days) from hospital for adults aged aged 18+, per 100,000 population

**Definition:** The number of delayed transfers of care (days) for adults who were ready for discharge from acute and non-acute beds, expressed as the rate per 100,000 of the adult population of Lincolnshire.

**Frequency / Reporting Basis:** Monthly / Cumulatively within the quarter

**Source:** NHSE Published Delayed Days Report (Sitrep)

**Table note:** In the analysis by delay reason below, the organisation that the delay reason is attributable to is included in parentheses i.e. NHS, SSD, NHS or SSD, BOTH.

**Observations from the data:**

There were a total of 2,856 delayed days for patients in August, 6% fewer than in July. The estimate for Q2 has therefore been revised down to 8,856 delayed days, which is still 1,000 higher than the Q2 target of 7,575 days. This would be 9% higher than the same time last year, when DTOC figures started to increase significantly. 48% of delayed days are from a non-acute setting which has stabilised after consecutive increases since the start of the year. Social Care delays have dropped back down to 23%, and NHS delays have increased to 68% which was the norm in 2015/16. In terms of delay reasons, almost two-thirds of delayed days relate to waiting for further non-acute care, residential or packages in the persons home. Delays relating to housing are higher than usual with 5% of delayed days. 45% of delayed days are in the United Lincolnshire's Hospital Trust, down from 63% in the last quarter of 2015/16, and the proportion of LCHS delayed days have fallen consistently each month since the start of the year.

Note: \*Total of NHS Trust delayed days will never equal Total LCC delayed days, because NHS delays can relate to treatment of residents from other authorities.

Local Performance / Patient Experience Metrics

<p><b>5. The proportion of people aged 65+ offered Reablement services following discharge from hospital (ASCOF 2B part 2)</b></p> <p><b>Definition:</b> The number of people aged 65+ offered Reablement services following discharge from hospital during October to December, as a proportion of the total number of people aged 65+, discharged alive from hospitals in England between 1 October 2015 and 31 December 2015</p> <p><b>Frequency / Reporting Basis:</b> Annual <b>Source:</b> SALT STS004 / Hospital Episode Statistics</p>	<p><b>6. Proportion of people feeling supported to manage their long term condition</b></p> <p><b>Definition:</b> Of the number of people identifying a long-term condition in their responses, the % who responded 'Yes, definitely' or 'Yes, to some extent' to the question 'In the last 6 months, have you had enough support from local services or organisations to help you manage your long-term health condition(s)?'.</p> <p><b>Frequency / Reporting Basis:</b> 6-monthly / results from 2 GP patient surveys in the year are aggregated and reported as an annual figure <b>Source:</b> GP Patient Survey</p>
<p><b>Observations from the data:</b> This is a new measure for the 2016/17 BCF. The calculation relies on hospital episode statistics published by NHS Digital, so will officially be reported annually in line with the ASCOF timetable. However, as with the other reablement measure earlier in this report, a mid year position is being calculated to show progress, although the denominator will use the year end figures, since the HES for April to June are not available.</p>	<p><b>Observations from the data:</b> Figures for 2015/16 have just been provided for 2015/16. The target of 64% was only just missed. The South West CCG was the only CCG to hit the 64% target, and had the highest proportion of patients who felt supported, with 65.1%.</p>
