	Hoople
Total payroll resource	Approx 20 experienced FTEs
Current payroll size	c10,000
Payroll experience / complexity	High / 30+ years
Service delivery maturity	Effective service delivery. Emphasis is on the system to ensure that the payroll is accurate, rather than completing substantial manual checking. Focuses on continual improvement and driving out efficiencies through best use of the system, which justifies the smaller resource footprint. Technical system team work very closely with payroll delivery team to achieve this. Have good set of self-service forms, but have not yet launched for schools. Client references
	taken were very positive with demonstable examples provided which would de-risk and LCC implementation (e.g. go-live floorwalking).
Scalability	Not sufficiently large enough team to avoid having to scale up. Would recruit an extra circa 19 FTE which appears more achievable in the time available, and would move existing resources on to LCC work and backfill with new resources. Smaller resource footprint because of the different approach to service delivery.
F&R experience	No current F&R expertise (but has relationship with Gloucestershire Fire and Rescue Service). Are very experienced with Agresso so have the technical skills to understand the current configuration issues and address them - this was demonstrated in their specific response within the scenario testing review (especially test 5). Would recruit additional F&R experience.
School experience	Around 55 schools
NHS experience	Yes
Current error rate	0.3% (1.01% UK 2015 Average)
System capabilities (payroll)	Integrated ERP. Currently not proven for F&R but significant assurance given through scenario testing response. Agresso is not generally recognised as best of breed payroll solution however currently operates very well and have implemented experience packs in Agresso so usability is improved which should address some of the data entry errors. Some new functionality built for schools and looks good but not yet implemented.
Transition / Implementation Risk (payroll)	Approach appears to be sound, full ERP so reduced number of separate implementations. Overall risk reduced through using an existing production build, and being another Agresso implemention transition would be more of a mapping and validation exercise than a 'data transformation' task. Hoople are located 3 hours away making collaboration and build process slightly more complicated.

Legacy data issues (future risks associated with current issues)

Would be very focussed on ensuring the build is right from the start, and reviewing processes, procedures and data quality. Depth of Agresso experience would largely mitigate this, although should significant issues be found and migrate to the live environment, they don't currently have the same depth of checking and resourcing as another to tackle the

issue.
