

## **Lincolnshire Statement of Accounting Policies 2023/24**

### 1. General Principles and Concepts.

The Statement of Accounts summarises the Council's transactions for the financial year 2023/24 and the position at the year ended 31 March 2024. The Statement of Accounts has been prepared in accordance with the Accounts and Audit Regulations 2015. These regulations require the accounts to be prepared in accordance with proper accounting practice. These practices are set out in the Code of Practice on Local Authority Accounting in the United Kingdom 2023/24 and supported by International Financial Reporting Standards and statutory guidance.

The accounting convention adopted in the Statement of Accounts is principally historical cost, modified by the revaluation of certain categories of non-current assets and financial instruments.

### 2. Changes in Accounting Policies.

Changes in accounting policy may arise through changes to the Code or changes instigated by the Council. For changes brought in through the Code, the Council will disclose the information required by the Code. For other changes we will disclose: the nature of the change; the reasons why; report the changes to the current period and each prior period presented and the amount of the adjustment relating to periods before those presented. If retrospective application is impracticable for a particular prior period, we will disclose the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied.

### 3. Prior period adjustments – estimates and errors.

The Code requires prior period adjustments to be made when material omissions or misstatements are identified (by amending opening balances and comparative amounts for the prior period). Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud.

The following disclosures will be made:

- the nature of the prior period error.
- for each prior period presented, to the extent practicable, the amount of the correction for each Financial Statement line item affected; and
- the amount of the correction at the beginning of the earliest prior period presented.

Changes in accounting estimates are accounted for prospectively, i.e. in the current and future years affected by the change. They do not give rise to a prior period adjustment.

#### 4. Non-Current Assets – Property, Plant and Equipment.

Property, Plant and Equipment are assets that have a physical substance and are:

- held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and
- expected to be used during more than one period.

#### Classification

Property, Plant and Equipment is classified under the following headings in the Council's Balance Sheet:

#### Operational Assets:

- Land and Buildings.
- Vehicles, Plant, Furniture and Equipment.
- Infrastructure Assets; and
- Community Assets.

#### Non-Operational Assets:

- Surplus Assets; and
- Assets under Construction.

Infrastructure assets include carriageways, footways and cycle tracks, structures (e.g. bridges), street lighting, street furniture (e.g. illuminated traffic signals, bollards), traffic management systems and land, which together form a single integrated highways network.

Community Assets are assets that the Council intends to hold in perpetuity, that have no determinable useful life, and which may, in addition, have restrictions on their disposal. They largely comprise of open land. They are classified as operational assets in that their use provides or supports the relevant services of the Council. Community Assets include, for example, countryside parks and beaches and sandhills.

#### Recognition

Expenditure on the acquisition, creation or enhancement of property, plant and equipment is capitalised on an accruals basis, provided that:

- it is probable that future economic benefits associated with the item will flow to the entity; and
- the cost of the item can be measured reliably.

Expenditure that maintains but does not add to an asset's potential to deliver future economic benefits or service potential (i.e. repairs and maintenance) is charged as an expense when it is incurred.

#### Measurement

Assets are initially measured at cost, comprising:

- the purchase price.
- any costs attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management.
- the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located.

The authority does not capitalise borrowing costs incurred while assets are under construction. The cost of an asset acquired other than by purchase is deemed to be its fair value, unless the acquisition does not have commercial substance (i.e. it will not lead to a variation in the cash flows of the authority). In the latter case, where an asset is acquired via an exchange, the cost of the acquisition is the carrying amount of the asset given up by the authority.

The Council has set a de minimis level of £10k for recognising Property, Plant and Equipment. This means that any item or scheme costing more than £10k must be treated as capital if the above criteria are met. This relates to initial recognition and subsequent expenditure on assets.

**Donated assets** are measured initially at fair value. The difference between fair value and any consideration paid is credited to the taxation and non-specific grant income line of the Comprehensive Income and Expenditure Statement, unless the donation has been made conditionally. Until conditions are satisfied, the gain is held in the donated assets account. Where gains are credited to the Comprehensive Income and Expenditure Statement, they are reversed out of the General Fund balance to the capital adjustment account in the Movement in Reserves Statement.

Assets are then carried in the Balance Sheet using the following measurement bases:

#### **Operational Assets**

- **Infrastructure Assets, Community Assets and Assets under Construction** are measured at depreciated historic cost. Where historic cost information is not known for Community Assets these have been included in the Balance Sheet at a nominal value. Highways infrastructure assets are generally measured at depreciated historical cost, however this is a modified form of historical cost – opening balances for highways Infrastructure Assets were originally recorded in balance sheets at amounts of capital undischarged for sums borrowed as at 1 April 1994, which was deemed at that time to be historical cost.
- **Property Assets** – Land and Buildings are measured at current value for their service potential, which is determined as the amount that would be paid for the asset in its existing use (existing use value or EUV). Property Assets – Land and Buildings where there is no market-based evidence of fair value because of the specialist nature of the asset and because the type of asset is rarely sold, are measured at depreciated

replacement cost (DRC). Such specialised assets include schools and fire stations, as well as the building and equipment used for the Energy from Waste plant.

- **Vehicles, Plant and Equipment** are measured at current value. These are determined as having relatively short useful economic lives and/or relatively low values and historic cost is used as a proxy for current value.

#### **Non-Operational Assets**

- **Surplus Assets** are measured at fair value, which is estimated at highest and best use from a market participant's perspective. This is the price that would be received to sell an asset, or paid to transfer the liability, in an orderly transaction between market participants at the measurement date. The Council uses the assumptions that the market participants, i.e. buyers and sellers in the principal or most advantageous market, would use when pricing an asset or liability under current market conditions, including assumptions about risk. Therefore, the Council's reasons for holding a surplus asset are not relevant when measuring its fair value.
- **Assets Under Construction** which are not yet operational, are measured at historic cost. When these assets are operationally complete, they are reclassified into the appropriate asset class and valued under the adopted approach,
- **All Other Assets** – current value, determined as the amount that would be paid for the asset in its existing use (EUV).

The Council values Property, Plant and Equipment using the basis recommended by CIPFA in the Accounting Code of Practice and in accordance with the Royal Institution of Chartered Surveyors (RICS) Valuation – Professional Standards, the RICS Valuation – Global Standards 2017 and RICS Guidance Notes.

Assets included in the Balance Sheet at current value are revalued sufficiently regularly to ensure that their carrying amount is not materially different from their current value at the year-end, but as a minimum every five years. Increases in valuations are matched by credits to the Revaluation Reserve to recognise unrealised gains. Exceptionally, gains might be credited to the surplus or deficit on the provision of services where they arise from the reversal of a loss previously charged to a service.

Where decreases in value are identified, they are accounted for by:

- where there is a balance of revaluation gains for the asset in the Revaluation Reserve, the carrying amount of the asset is written down against that balance (up to the amount of the accumulated gains).
- where there is no balance in the Revaluation Reserve or an insufficient balance, the carrying amount of the asset is written down against the relevant service line(s) in the Comprehensive Income and Expenditure Statement.

The Revaluation Reserve contains revaluation gains recognised since 1 April 2007 only, the date of its formal implementation. Gains arising before that date have been consolidated into the Capital Adjustment Account.

#### Impairment

If an asset's carrying amount is more than its recoverable amount, the asset is described as impaired. Circumstances that indicate impairment may have occurred include:

- a significant decline in an asset's market value during the period.
- evidence of obsolescence or physical damage of an asset.
- a commitment by the Authority to undertake a significant reorganisation.
- a significant change in the statutory environment in which the Authority operates.

Assets are assessed at each year-end as to whether there is any indication that an asset may be impaired. Where indications exist and any possible differences are estimated to be material, the recoverable amount of the asset is estimated and, where this is less than the carrying amount of the asset, an impairment loss is recognised for the shortfall.

Where impairment losses are identified, they are accounted for by:

- where there is a balance of revaluation gains for the asset in the revaluation reserve, the carrying amount of the asset is written down against that balance (up to the amount of the accumulated gains).
- where there is no balance of revaluation gains for the asset in the Revaluation Reserve, or an insufficient balance in the Revaluation Reserve, or the asset is not revalued as it is measured at historic cost; the carrying amount of the asset is written down to the recoverable amount and the amount written down is charged against the relevant service line(s) in the Comprehensive Income and Expenditure Statement. This is then reversed through the Movement in Reserves Statement and charged to the Capital Adjustment Account.

Where an impairment loss is reversed subsequently, the reversal is credited to the relevant service line(s) in the Comprehensive Income and Expenditure Statement, up to the amount of the original loss, adjusted for depreciation that would have been charged if the loss had not been recognised.

#### Componentisation of Non-Current Assets

Where an item of Property, Plant and Equipment asset has major components whose cost is significant in relation to the total cost of the item, the components are depreciated separately. The Council has identified the following significant components within the property portfolio:

- Depreciated Replacement Cost (DRC) assets (including fire stations, schools, libraries, and museums where the building is of a specialised nature): land, structures, services, roof, and externals.

- Office Accommodation/Administrative Buildings: land; structures, services, roof, and externals.
- Other market value and existing use value assets (including economic regeneration units): land and buildings.
- Energy from Waste Plant: Civils, Mechanicals and Instrumentation, Control and Automation (for each significant part of the plant).

#### Depreciation

Depreciation is provided for on all property, plant and equipment assets by the systematic allocation of their depreciable amounts over their useful lives. An exception is made for assets without a determinable finite useful life (i.e. freehold land and certain community assets) and assets that are not yet available for use (i.e. assets under construction).

Depreciation is calculated on the following bases:

- **Operational Buildings** are depreciated over their useful life. For buildings which are held at existing use value (EUV) a useful life of 40 years has been assumed. Asset lives for buildings held on a depreciated replacement cost (DRC) basis are reviewed as part of the rolling programme of revaluations and the Valuer estimates the useful life. Depreciation is charged on a straight-line basis.
- **Infrastructure Assets.** Depreciation is provided on the parts of the highways network of infrastructure assets that are subject to deterioration or depletion and by the systematic allocation of their depreciable amounts over their useful lives. Depreciation is charged on a straight-line basis. Useful lives of the various parts of the highways network are assessed by the Council's Highways Engineers using industry standards where applicable as follows:
  - 1-4 years for capital pothole filling.
  - 6-12 years for carriageway surface dressing and slurry sealing.
  - 20 years for carriageways Primary Road Network (PRN) & Non PRN.
  - 20 years for Bus infrastructure.
  - 20 years for footways/cycleways.
  - 20 years for Public Right of Way (PROW).
  - 20 years for street furniture.
  - 20 years for Traffic Management
  - 40 years for street lighting, kerbs, and drains.
  - 60 years for major road structures (i.e. sub base, underpasses).
  - Up to 120 years for bridge structures.
- Furniture and Non-Specialist Equipment is depreciated over a period of 5 years, on a straight line basis.

- Vehicles, Plant, and Specialist Equipment (including computing equipment) are depreciated over their estimated useful lives. Currently these vary depending on the nature of the asset, from 3 years to up to 25 years for solar panels.
- Land, Property and Equipment associated with the Energy from Waste Plant are depreciated over their estimated useful lives. These range from 70 years for civils (including building structures) to 10 years for instrumentation, control and automation (ICA) assets.
- Surplus Assets are depreciated in line with the relevant operational asset class.
- No depreciation is charged on Land or on Assets Under Construction.

Revaluation gains are also depreciated, with an amount equal to the difference between current value depreciation charged on assets and the depreciation that would have been chargeable based on their historical cost being transferred each year from the revaluation reserve to the capital adjustment account.

Depreciation of an asset begins the year the asset becomes available for use. The charge is for 6 months in the first year, for twelve months every year thereafter and ceases when the asset has been derecognised. There is a full year's depreciation in the year of disposal.

#### Disposals and Non-Current Assets held for sale.

When it becomes probable that the carrying amount of an asset will be recovered principally through a sale transaction rather than through its continuing use, it is reclassified as an asset held for sale. The asset is revalued immediately before reclassification and then carried at the lower of this amount and fair value less costs to sell. Where there is a subsequent decrease to fair value less costs to sell, the loss is posted to the other operating expenditure line in the Comprehensive Income and Expenditure Statement. Gains in fair value are recognised only up to the amount of any previously recognised losses in the surplus or deficit on the provision of services. Depreciation is not charged on assets held for sale.

If assets no longer meet the criteria to be classified as assets held for sale, they are reclassified back to non-current assets and valued at the lower of their carrying amount before they were classified as held for sale; adjusted for depreciation, amortisation or revaluations that would have been recognised had they not been classified as held for sale; and their recoverable amount at the date of the decision not to sell. Assets that are to be abandoned or scrapped are not reclassified as assets held for sale.

When an asset is disposed of or decommissioned, the carrying amount of the asset in the Balance Sheet (whether Property, Plant and Equipment or Assets held for Sale) is written off to the Other Operating Expenditure line in the Comprehensive Income and Expenditure Statement as part of the gain or loss on disposal. Receipts from disposals (if any) are credited to the same line in the Comprehensive Income and Expenditure Statement also as part of the gain or loss on disposal (i.e.

netted off against the carrying value of the asset at the time of disposal). Any revaluation gains accumulated for the asset in the revaluation reserve are transferred to the Capital Adjustment Account.

Amounts received for a disposal in excess of £10k are categorised as capital receipts. The balance of receipts remains within the Capital Receipts Reserve and can then only be used for new capital investment (or set aside to reduce the authority's underlying need to borrow). Receipts are appropriated to the Capital Receipts Reserve from the General Fund balance in the Movement in Reserves Statement. It is Council policy to utilise these receipts to fund the capital programme in the year they are received or to carry them forward to be used in future years, subject to the flexibility described in the next paragraph. Disposal proceeds below £10k are credited to the Comprehensive Income and Expenditure Statement.

Under a Direction issued pursuant to sections 16 and 20 of the Local Government Act 2003, capital receipts can also be used to fund revenue expenditure that is designed to generate on-going revenue savings or transform services to reduce costs and is properly incurred for the financial years commencing on 1 April 2016, 2017 and 2018. The Local Government Finance Settlement for 2018/19 announced a continuation of these rules for a further 3 financial years that begin on 1 April 2019, 2020 and 2021. There is a further 3 years extension from 2023/24. The Council did not use this flexibility in 2020/21, 2021/22 or 2022/23 i.e. capital receipts have not been applied to fund revenue transformation expenditure in these years.

The written-off value of disposals is not a charge against council tax, as the cost of non-current assets is fully provided for under separate arrangements for capital financing. Amounts are appropriated to the Capital Adjustment Account from the General Fund balance in the Movement in Reserves Statement.

[Derecognition associated with asset enhancements.](#)

When capital expenditure occurs on an existing asset the element of the asset being replaced must be derecognised. Where the original value of the asset being replaced is not known the value of the replacement will be used as a proxy and indexed back to an original cost with reference to the asset's remaining life. De-recognition costs will be charged to Other Operating Expenditure in the Comprehensive Income and Expenditure Statement (gain or loss on the disposal of non-current assets).

[Derecognition associated with fully depreciated assets measured at historic cost.](#)

For assets subject to depreciation which are carried at historic cost e.g. Equipment, de-recognition takes place in the year after an asset has been fully depreciated. This represents the end of an asset's useful life.

Ordinarily, Infrastructure Assets components of the highways network are derecognised in the year following the year in which they reach the end of their useful economic lives. At this point the carrying amount in the Balance Sheet is nil as the components are fully

depreciated. When a component of the network is disposed of or decommissioned before the end of its useful economic life e.g. due to an impairment, the carrying amount of the component in the Balance Sheet is written off to the Other Operating Expenditure line in the Comprehensive Income and Expenditure Statement as part of the gain or loss on disposal. The written-off amounts of disposals are not a charge against council tax, as the cost of non-current assets is fully provided for under separate arrangements for capital financing. Amounts are transferred to the capital adjustment account from the General Fund Balance in the Movement in Reserves Statement. For Infrastructure Assets, no replacement of any part of an asset takes place before that component has reached the end of its useful life, unless there has been an impairment.

#### 5. Intangible Assets.

Intangible assets are defined as identifiable non-financial (monetary) assets without physical substance but are controllable by the Council and expected to provide future economic or service benefits. For the Council, the most common classes of intangible assets are computer software and software licences.

a) *Recognition and Measurement.* Intangible assets are recognised when it is likely that future benefits will flow to the Council and the cost of the asset can be reliably measured. Assets that qualify as intangible assets shall be measured and carried at cost in the absence of an active market to determine fair value.

The Council has a set a de minimis level of £10k for recognising intangible assets. This means that any item or scheme costing more than £10k would be treated as capital if the above criteria are met.

b) *Subsequent Expenditure.* Costs associated with maintaining intangible assets are recognised as an expense when incurred in the Comprehensive Income and Expenditure Statement.

c) *Amortisation.* The carrying value of intangible assets with a finite life is amortised on a straight line basis over its useful life. Amortisation begins when the asset is available for use. The charge is for 6 months in the first year, for twelve months thereafter and ceases at the date that the asset is derecognised. There is a full year's amortisation in the year of disposal. Amortisation is charged to the relevant service area in the Comprehensive Income and Expenditure Statement.

The useful lives for intangible assets are between 1 and 7 years. Useful asset lives are determined by the ICT budget holder and reviewed and updated annually.

d) *Impairment.* On an annual basis the ICT budget holder is asked to consider if any indicators of impairment exist for intangible assets held by the Council.

## 06. Investment Properties

An Investment Property is defined as a property that is solely held to earn rental income or for capital appreciation or both. The definition is not met if the property is used in any way to facilitate the delivery of services or production of goods or is held for sale.

Rental income received in relation to Investment Properties are credited to the Financing and Investment Income line and results in a gain for the General Fund Balance. Depreciation is not charged on Investment Properties.

- a) **Initial Recognition.** As with Property, Plant and Equipment, initial recognition is at the costs associated with the purchase.
  
- b) **Measurement after Recognition.** Investment Properties will be measured at fair value, being the price that would be received to sell such an asset in an orderly transaction between market participants at the measurement date. As a non-financial asset, Investment Properties are measured at highest and best use using the current market conditions and recent sales prices and other relevant information for similar assets in the local area. The fair value of Investment Property held under a lease is the lease interest in the asset.
  
- c) **Revaluation Gains and Losses and Disposal of Investment Properties.**  
A gain or loss arising from a change in the fair value of Investment Property shall be recognised in the Financing and Investment Income and Expenditure line of the Comprehensive Income and Expenditure Statement. These are not permitted by statute to impact on the General Fund Balance therefore these gains or losses are reversed out of the General Fund Balance in the Movement on Reserves and posted to the Capital Adjustment Account.

## 07. Heritage Assets

Heritage assets are defined as assets with historical, artistic, scientific, technological, geophysical or environmental qualities; that are held and maintained principally for their contribution to knowledge and culture.

Windmills will be valued at existing use value by the Council's Valuer and where there is insufficient market data, Depreciated Replacement Value is used as a proxy. These valuations will be included on the Council's rolling programme and will be valued every 5 years.

Lincoln Castle and Temple Bruer will continue to be carried at historic cost. This is the capital expenditure on enhancements recognised since records began as the Council does not consider that a reliable valuation can be obtained for these assets. This is because of the nature of the assets held and the lack of comparable market values.

Collections include Fine Art Collection; the Tennyson Collection; Local Studies and Archive Collections; Lincolnshire Regiment, Militaria and Arms and Armour Collections; and

Agriculture Collections. The collections are relatively static, acquisitions and donations rare. When they do occur, acquisitions will be measured at cost and donations will be recognised at a valuation determined in-house. Collections will be valued based on the insurance valuations held by the Council. Insurance valuations will be reviewed and updated on an annual basis.

Heritage assets are recognised and measured (including the treatment of revaluations gains and losses) in accordance with the Council's accounting policy on non-current assets - Property, Plant and Equipment (accounting policy 4, above). However, some of the measurement rules are relaxed in relation to Heritage Assets.

Impairment and Disposals are accounted for in line with the Council's policy on non-current assets – Property, Plant and Equipment (accounting policy for Disposal of Property, Plant and Equipment and Impairment of non-current assets).

#### 08. Assets Held for Sale

These are assets held by the Council which are planned to be disposed of. They meet the following criteria:

- the asset must be available for immediate sale in its present condition subject to terms that are usual and customary for sales of such assets.
- the sale must be highly probable (with management commitment to sell and active marketing of the asset initiated).
- it must be actively marketed for sale at a price that is reasonable in relation to its current fair value; and
- the sale should be expected to qualify for recognition as a completed sale within one year.

Depreciation is not charged on non-current assets held for sale.

Measurement. Non-Current Assets Held for Sale are revalued immediately before reclassification to Held for Sale and then measured at the lower of carrying value and fair value, less costs to sell (fair value here is the amount that would be paid for the asset in its highest and best use, e.g. market value).

Disposal. Receipts from disposals are recognised in the Surplus or Deficit on provision of services.

Amounts in excess of £10k are categorised as capital receipts and can then only be used for new capital investment or to repay the principal of any amounts borrowed. It is Council policy to utilise these receipts to fund the capital programme in the year they are received or to carry them forward to be used in future years. These receipts are transferred from the General Fund Balance via the Movement in Reserves.

## 09. Donated Assets

Donated assets are non-current assets which are given to the Council at no cost or at below market value. These assets are initially recognised in the Balance Sheet at fair value. The difference between the fair value and any consideration paid is credited to the Taxation and Non-Specific Grant Income line of the Comprehensive Income and Expenditure Statement, unless the donation has been made conditionally.

a) Where there are conditions associated with the asset which remain outstanding, the asset will be recognised in the Balance Sheet with a corresponding liability in the Donated Assets Accounts.

b) Where there are no conditions or the conditions have been met, the donated asset will be recognised in the Comprehensive Income and Expenditure Statement and then transferred to the Capital Adjustment Account through the Movement in Reserves Statement.

After initial recognition, donated assets are treated like all other non-current assets held by the Council and are subject to revaluation as part of the Council's rolling programme.

## 10. Charges to Revenue for the use of Non-Current Assets.

Service accounts and central support services are charged with a capital charge for all non-current assets used in the provision of services to record the real cost of holding non-current assets during the year. The total charge covers:

- the annual provision for depreciation, attributed to the assets used by services.
- revaluation and impairment losses on assets used by services where there are no accumulated gains in the Revaluation Reserve against which the losses can be written off; and
- amortisation of intangible assets attributable to services.

The Council is not required to raise Council Tax to cover depreciation, impairment losses or amortisation. However, it is required to make a prudent annual provision from revenue to contribute towards the reduction in its overall borrowing requirement. Depreciation, impairment losses and amortisation are therefore replaced by a minimum revenue provision in the Movement in Reserves Statement, by way of an adjusting transaction with the Capital Adjustment Account for the difference between the two.

## 11. Minimum Revenue Provision.

The Council makes provision for the repayment of debt in accordance with the Local Authorities (Capital Finance and Accounting) (England) (Amendment) Regulations 2008. This requires the Council to set a Minimum Revenue Provision (MRP) which it considers to be prudent. The approach adopted by the Council is to use the average life method (the average life of all the Council's assets) in calculating the MRP to be charged to revenue each year.

For pre 2008 debt this is based on a standard asset life of 50 years equating to a 2% flat charge. For 2009-10 debt onwards, asset life of differing categories of assets is estimated

and a charge based on an annuity method is used for Major New Road Schemes, where the benefit of these assets are expected to increase in later years. A charge based on Equal Instalments of Principal is used for all other categories of assets. The Council does not charge MRP for Major New Road Schemes until assets have become operational.

#### 12. Revenue Expenditure Financed through Capital under Statute.

Expenditure incurred during the year that may be capitalised under statutory provisions but does not result in the creation of a non-current asset in the Balance Sheet; has been charged as expenditure to the relevant service revenue account in the year.

Statutory provision reverses these charges from the Surplus or Deficit on provision of services by debiting the Capital Adjustment Account and crediting the General Fund Balance via the Movement in Reserves Statement.

#### 13. Private Finance Initiatives (PFI) and Similar Contracts

The Council has one PFI scheme for the provision of seven separate schools across the County which is classified as a Service Concession Arrangement.

Service Concession Agreements are agreements to receive services where the responsibility for making available the Property, Plant and Equipment needed to provide the services passes to the contractor. As the Council is deemed to control the services that are provided under such schemes and as ownership of the assets will pass to the Council at the end of the contract for no additional charge, the Council carries these assets used under the contracts on the Balance Sheet as part of Property, Plant and Equipment.

The original recognition of these assets is balanced by the recognition of a liability for amounts due to the scheme operator to pay for the assets. Assets recognised on the Balance Sheet are revalued and depreciated in the same way as Property, Plant and Equipment owned by the Council.

The amounts payable to the contractors each year are analysed into five elements:

- fair value of the services received during the year – debited to the relevant service in the Comprehensive Income and Expenditure Statement.
- finance cost – an interest charge of 7.20% on the outstanding Balance Sheet liability, debited to Financing and Investment Income and Expenditure in the Comprehensive Income and Expenditure Statement.
- contingent rent – increases in the amount to be paid for the property arising during the contract, debited to Financing and Investment Income and Expenditure in the Comprehensive Income and Expenditure Statement.
- payment towards liability – applied to write down the Balance Sheet liability towards the contractor; and
- lifecycle replacement costs – recognised as additions to Property, Plant and Equipment on the Balance Sheet.

#### 14. Borrowing Costs.

The Council has adopted the accounting policy of expensing borrowing costs of qualifying assets to the Comprehensive Income and Expenditure Statement (disclosed within Financing and Investment Income and Expenditure in the Comprehensive Income and Expenditure Statement) in the year in which they are incurred. This is current practice based on the fact that borrowing undertaken is not attributed to individual schemes making capitalisation of costs complex with marginal benefit.

#### 15. Classification of Leases.

Leases are classified as a finance lease or an operating lease, depending on the extent to which risks and rewards of ownership of a leased Property, Plant and Equipment lie with the lessor (landlord) or the lessee (tenant).

IAS 17 'Leases' includes indicators for the classification of leases as a finance lease. Within these indicators the Council has set the following criteria: the 'major part' of the asset life is determined to be 75%; and 'substantially all' of the value is determined to be 75%.

- Finance Lease: A lease is classified as a finance lease when the lease arrangement transfers substantially all the risks and rewards incidental to ownership of an asset to the lessee.
- Operating Lease: All other leases are determined to be operating leases.

Where a lease covers both land and buildings, these elements are considered separately. This policy on accounting for leased assets also includes contractual arrangements that do not have the legal status of a lease but convey a right to use an asset in return for payment.

##### a) Finance Leases

i) Lessee – Vehicles, Plant & Equipment will be recognised on the Balance Sheet at cost and depreciated on a straight line basis over the term of the lease (in line with the Council's capitalisation and depreciation policy for vehicles, plant and equipment).

ii) Lessee – Property will be recognised on the Balance Sheet at an amount equal to the fair value of the property, or if lower, the present value of the minimum lease payments, determined at the inception of the lease.

The asset recognised is matched by a liability representing the obligation to pay the lessor. This is reduced as lease payments are made. Minimum lease payments are to be apportioned between the finance charge (debited to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement) and the reduction of the deferred liability in the Balance Sheet.

Statutory provision reverses the finance charge, depreciation and any impairment or revaluation from the Comprehensive Income and Expenditure Statement to the Capital Adjustment Account through the Movement in Reserves statement. Instead, a prudent annual contribution is made from revenue funds towards the deemed capital investment in accordance with statutory requirements.

iii) Lessor – Property. When a finance lease is granted on a property, the relevant assets are written out of the Balance Sheet to gain or loss on disposal of assets in the Other Operating Expenditure line of the Comprehensive Income and Expenditure Statement. A gain is also recognised on the same line in the Comprehensive Income and Expenditure Statement to represent the Council's net investment in the lease. This is matched by a lease asset set up in long term debtors in the Balance Sheet. The lease payments are apportioned between repayment of principal written down against the lease debtor and finance income (credited to the Finance and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement).

Initial direct costs are included in the initial measurement of the debtor and recognised as an expense over the lease term on the same basis as the income.

Rental income from finance leases entered into after 1 April 2010 will be treated as a capital receipt and removed from the General Fund Balance to capital receipts via the Movement in Reserves Statement.

The write off value of disposals is not a charge against council tax as the cost of non-current assets is fully provided for under separate arrangements for capital financing. Amounts are therefore appropriated to the Capital Adjustment Account from the General Fund Balance via the Movement in Reserves Statement.

#### b) Operating Leases

i) Lessee – Property, Vehicles, Plant & Equipment will be treated as revenue expenditure in the service revenue accounts in the Comprehensive Income and Expenditure Statement on a straight line basis over the term of the lease.

ii) Lessor – Property, Vehicles, Plant & Equipment shall be retained as an asset on the Balance Sheet. Rental income is recognised on a straight line basis over the lease term, credited to the Other Operating Expenditure line in the Comprehensive Income and Expenditure Statement.

#### c) Investment Property Leases (Lessee).

In line with IAS 40 'Investment Properties' any lease which is assessed to be an Investment Property will be treated as if it was a finance lease. The fair value of the lease interest is used for the asset recognised. Separate measurement of land and buildings elements is not required when the leases are classified as an Investment Property.

### 16. Government Grants and Contributions.

Government grants and contributions may be received on account, by instalments or in arrears. However, they should be recognised in the Comprehensive Income and Expenditure Statement as due to the Council when there is reasonable assurance that:

- The Council will comply with the conditions attached to the payments. Conditions are stipulations that specify how the future economic benefits or service potential embodied in the grant or contribution must be consumed, otherwise the grant or contribution will have to be returned to the awarding body; and

- The grant or contribution will be received.

Grants and contributions received where the conditions have not yet been satisfied are carried in the Balance Sheet as creditors and are not credited to the Comprehensive Income and Expenditure Statement until the conditions are met.

#### Capital Grants and Contributions (non-current assets)

Capital grants and contributions are used for the acquisition of non-current assets. The treatment of these grants is as follows:

- Capital grants where no conditions are attached to the grant and the expenditure has been incurred. The income will be recognised immediately in Comprehensive Income and Expenditure Statement in the taxation and non-specific grant income line. Capital grant income is not a proper charge to the General Fund. It is accounted for through the Capital Financing Requirement (set out in statute) and therefore it does not have an effect on council tax. To reflect this, the income is credited to the Capital Adjustment Account through the Movement in Reserves Statement.
- Capital grants where the conditions have not been met at the Balance Sheet date. The grant will be recognised as a Capital Grant Receipt in Advance in the liabilities section of the Balance Sheet. When the conditions have been met, the grant will be recognised as income in the Comprehensive Income and Expenditure Statement and the appropriate statutory accounting requirements for capital grants applied.
- Capital grants where no conditions remain outstanding at the Balance Sheet date, but expenditure has not been incurred. The income will be recognised immediately in the Taxation and Non Specific Grant Income line of the Comprehensive Income and Expenditure Statement. As the expenditure being financed from the grant has not been incurred at the Balance Sheet date, the grant will be transferred to the Capital Grants Unapplied Account (within usable reserves section of the Balance Sheet), through the Movement in Reserves Statement. When the expenditure is incurred, the grant shall be transferred from the Capital Grants Unapplied Account to the Capital Adjustment Account to reflect the application of capital resources to finance expenditure.

#### Revenue Government Grants and Contributions

Government grants and other contributions are accounted for on an accruals basis and recognised in the Comprehensive Income and Expenditure Statement when the conditions for their receipt have been complied with and there is reasonable assurance that the grant or contribution will be received. Where the conditions have not been met, these grants will be held as creditors on the Balance Sheet.

Specific revenue grants are included in the specific service expenditure accounts together with the service expenditure to which they relate. Grants which cover general expenditure (e.g. Revenue Support Grant) are credited to the Taxation and Non-specific Grant Income in the Comprehensive Income and Expenditure Statement after Net Cost of Services.

## 17. Debtors

Debtors are recognised in the accounts when the ordered goods or services have been delivered or rendered by the Council in the financial year, but the income has not yet been received.

Debtors are initially recognised and measured at fair value of the consideration payable in the accounts. Most debtors are considered to be contractual and these are then subsequently measured at amortised cost.

If settlement is over a year this is accounted for as long term debtor. When considering the amortised cost of long term debtors, the Council has set a £50k de minimis limit. Below this amount, the carrying value of the long term debtor will be used as a proxy for amortised cost.

For estimated manual debtors, a de minimis level of £25k for individual revenue items and £50k for capital items is set.

## 18. Creditors

Creditors are recorded where goods or services have been supplied to the Council by 31 March, but payment is not made until the following financial year.

Creditors are initially recognised and measured at fair value in the accounts. If payment is deferred to over a year, this is accounted for as a long term creditor. When considering the amortised cost of long term creditors, the Council has set a £50k de minimis limit. Below this amount, the carrying value of the long term creditors will be used as a proxy for amortised cost.

For estimated manual creditors, a de minimis level of £25k for individual revenue items and £50k for capital items is set.

## 19. Inventories

Inventory assets include and will be carried at the following values:

- Materials or supplies to be consumed or distributed in the rendering of services (e.g. highways salt). These are carried at the lower of cost (calculated as an average price) or current replacement cost (at the Balance Sheet date for an equivalent quantity); and
- Held for sale or distribution in the ordinary course of operations are carried at the lower of cost or net realisable value.

The Council has set a de minimis level for recognising inventories of £100k. Inventory balances below this level are not recorded on the Balance Sheet.

## 20. Cash and Cash Equivalents

Cash is represented by cash in hand and deposits with financial institutions repayable without penalty on notice of not more than 24 hours.

Cash Equivalents are held for the purpose of meeting short term cash commitments rather than for investment or other purposes. The Council will classify these as follows:

- Instant Access Deposit Accounts or Overnight Bank Facilities set up for the purpose of meeting short term liquidity requirements and whose return (if any) does not make up the Average Yield Return on Investments, are to be classed as Cash Equivalents.
- Overnight Fixed Deposits, Deposit Based Bank Accounts and Net Asset Value Money Market Funds held for investment purposes for the returns offered, which make up the Council's Average Yield Return on its Investments, are to be classed as Short Term Investments.

Bank Overdrafts are to be shown separately from Cash and Cash Equivalents where they are not an integral part of an Authority's cash management. Where a bank overdraft is assessed as part of the Council's cash management it will be included within Cash and Cash Equivalents.

## 21. Provisions

The Council sets aside provisions for future expenses where:

- a past event has created a current obligation (legal or constructive) to transfer economic benefit.
- it is probable that an outflow of economic benefits or service potential will be required to settle the obligation; and
- a reliable estimate can be made of the amount of the obligation

Provisions are charged to relevant revenue service account in the Comprehensive Income and Expenditure Statement in the year the Council has an obligation. When the obligation is settled, the costs are charged to the provision set up in the Balance Sheet. When payments are eventually made they are charged against the provision carried in the Balance Sheet.

Provisions contained within the Balance Sheet are split between current liabilities (those which are estimated to be settled within the next 12 months) and non-current liabilities (those which are estimated to be settled in a period greater than 12 months).

Provisions are recognised and measured at the best estimate at the balance sheet date of the expenditure required to settle the obligation, taking into account relevant risks and uncertainties.

## 22. Contingent Liabilities

A contingent liability is where there is a possible obligation to transfer economic benefit resulting from a past event, but the possible obligation will only be confirmed by the occurrence or non-occurrence of one or more events in the future. These events may not wholly be within the control of the Council. The Council discloses these obligations in the narrative notes to the accounts.

These amounts are not recorded in the Council's accounts because:

- it is not probable that an outflow of economic benefits or service potential will be required to settle the obligation; or
- The amount of the obligation cannot be measured with sufficient reliability at the year end.

The Council has set a de minimis level for disclosing Contingent Liabilities of £500k.

### 23. Contingent Assets

A contingent asset is where there is a possible transfer of economic benefit to the Council from a past event, but the possible transfer will only be confirmed by the occurrence or non-occurrence of one or more events in the future. These events may not wholly be within the control of the Council. The Council discloses these rights in the narrative notes to the accounts.

The Council has set a de-minimis level for disclosing Contingent Assets of £500k.

### 24. Events after the Reporting Date

These are events that occur between the end of the reporting period and the date when the Statement of Accounts is authorised for issue. The Council will report these in the following way if it is determined that the event has had a material effect on the Council's financial position:

- Events which provide evidence of conditions that existed at the end of the reporting period will be adjusted and included within the figures in the accounts; and
- Events that are indicative of conditions that arose after the reporting period will be reported in the narrative notes to the accounts.

Events which take place after the authorised for issue date are not reflected in the Statement of Accounts.

### 25. Recognition of Revenue (Income).

Revenue is accounted for in the year it takes place, not simply when cash payments are received. The Council recognises revenue from contracts with service recipients, whether for services or the provision of goods, when (or as) the goods or services are transferred to the service recipient in accordance with the performance obligation in the contract.

Interest receivable on investments is accounted for on the basis of the effective interest rate for the relevant financial instrument rather than the cash flows fixed or determined by the contract.

### 26. Exceptional Items

Exceptional items are material amounts of income or expenditure which occur infrequently in the course of the Council's normal business and are not expected to arise at regular intervals. When these items of income or expense are material, their nature and amount will

be disclosed separately, either on the face of the Comprehensive Income and Expenditure Statement or in the notes to the accounts depending on how significant the items are to an understanding of the Council's financial performance.

#### 27. Costs of Support Services.

The costs of overheads and support services are charged to service segments in accordance with the authority's arrangements for accountability and financial performance.

#### 28. Acquired and Discontinued Operations

Where the Council takes on new activities or ceases providing services, the costs relating to these activities will be identified in the Comprehensive Income and Expenditure Statement on the surplus or deficit on acquired and/or discontinued operations line. These items will not form part of the net cost of services in the Comprehensive Income and Expenditure Statement in the year they occur.

#### 29. Value Added Tax (VAT).

The Council's Comprehensive Income and Expenditure Statement excludes VAT unless this is not recoverable from HM Revenue and Customs. All VAT must be passed on (where output tax exceeds input tax) or repaid (where input tax exceeds output tax) to HM Revenue and Customs. The net amount due to or from HM Revenue and Customs for VAT at the year-end shall be included as part of creditors or debtors balance.

#### 30. Council Tax and Business Rates Income.

The collection of Council Tax and Business Rates is in substance an agency arrangement with the seven Lincolnshire District Councils (billing Authorities) collecting Council Tax and Business Rates on behalf of the Council.

The Council Tax and Business Rates income is included in the Comprehensive Income and Expenditure Statement on an accruals basis and includes the precept for the year plus the Council's share of Collection Fund surpluses and deficits from the billing Authorities.

The difference between the income reported in the Comprehensive Income and Expenditure Statement and the amount required by regulation to be credited to the General Fund, shall be taken to the Collection Fund Adjustment Account through the Movement in Reserves Statement.

The year-end Balance Sheet includes the Council's share of debtors (arrears and collection fund surpluses, net of the impairment allowance for doubtful debts), creditors (prepayments, overpayments, and collection fund deficits), and provisions (business rate appeals).

#### 31. Usable Reserves

##### Usable Reserves

The Council's general revenue balances are held in the General Fund. The Council also maintains a number of specific 'earmarked' reserves for future expenditure on either policy

purposes or to cover contingencies. When expenditure is financed from an earmarked reserve, it is charged to the relevant revenue service account in the Comprehensive Income and Expenditure Statement. The reserve is then appropriated back to the General Fund Balance via the Movement in Reserves Statement, so that there is no net charge against Council Tax.

#### Unusable reserves

Certain reserves are kept to maintain the accounting processes for non-current assets, financial instruments, and employee benefits. These accounts do not represent usable resources for the Council.

### 32. Employee Benefits – Benefits Payable during Employment.

**Benefits Payable During Employment – Short Term Benefits.** These are amounts expected to be paid within 12 months of the Balance Sheet date. These include:

- Salaries, wages, and expenses accrued up to the Balance Sheet date. These items are charged as an expense to the relevant service revenue account in the year the employees' services are rendered; and
- Annual leave not yet taken at the Balance Sheet date. An accrual is made for items at the wage and salary rate payable. The accrual is charged to the relevant service revenue account, but then reversed out through the Movement in Reserves Statement to the Accumulated Absences Account, so this does not have an impact on Council Tax.

**Teacher Leave Accrual.** The accrual for short term benefits for teachers is calculated using a standard methodology, reflecting the fact that teachers across the Council are subject to standard terms and conditions of employment. This methodology is based on the number of days of the Spring Term (both term-time and holiday) that fall within the financial year and the leave entitlement of the teacher (which varies according to whether an individual has left the teaching profession at the end of the Spring term).

**Long Term Benefits.** These are amounts which are payable beyond 12 months. The Council does not have any material long term benefits to be declared within the Financial Statements.

### 33. Termination Benefits

Employee termination benefits arise from the Council's obligation to pay redundancy costs to employees. These costs will be recognised in the Council's Financial Statements at the earlier of when the Council can no longer withdraw the offer of those benefits or when the Council recognises the costs for a restructuring. For example, when there is a formal plan for redundancies (including the location, function and approximate number of employees affected; the termination benefits offered, and the time of implementation).

These items will be accrued in the Balance Sheet at year end and charged to the relevant service revenue account. If payments are likely to be payable in more than 12 months from

the year end, then these costs will be discounted at the rate determined by reference to market yields.

Where termination benefits involve the enhancement of pensions, statutory provisions require the General Fund Balance to be charged with the amount payable by the Authority to the pension fund or pensioner in the year, not the amount calculated according to the relevant accounting standards. In the Movement in Reserves Statement, appropriations are required to and from the Pensions Reserve to remove the notional debits and credits for pension enhancement termination benefits and replace them with debits for the cash paid to the pension fund and pensioners and any such amounts payable but unpaid at the year-end.

#### 34. Employee Benefits – Post Employment Benefits (Pensions).

The Council participates in four different pension schemes which provide scheme members with defined benefits related to pay and service. The schemes are as follows:

- **Teachers' Pension Scheme:** This is a notionally funded scheme administered nationally by Capita Teachers' Pensions on behalf of the Department for Education (DfE). The pension contributions to be paid by the Council are determined by the Government Actuary and reviewed periodically. The scheme is accounted for as if it were a defined contribution scheme. There is no liability for future payments of benefits recognised in the Balance Sheet. All employers' contributions payable to teachers' pensions in the year are treated as expenditure on the Schools service line in the Comprehensive Income and Expenditure Statement.
- **National Health Service Pension Scheme (NHSPS):** This is a notional funded scheme administered nationally by NHS Pensions on behalf of the Department of Health and Social Care (DHSC). The pension contributions to be paid by the Council are determined by the Government Actuary and reviewed periodically. The scheme is accounted for as if it were a defined contribution scheme. There is no liability for future payments of benefits recognised in the Balance Sheet. The employer's contributions payable to the NHSPS in the year are treated as expenditure in the Children's Services and Adult Care and Community Wellbeing service lines in the Comprehensive Income and Expenditure Statement.
- **Uniformed Firefighters Pension Scheme (FPS):** From 1 April 2015, a new pension fund for Firefighters was set up. This scheme replaced the 2006 & 1992 Firefighters schemes for new Firefighters. The 2015, 2006 and 1992 schemes remain unfunded but there are differences in the contributions payable into each scheme and the benefits paid to members. Both employee and employer contributions are paid into the three funds, against which pension payments are made. Each fund is topped up by additional government funding if contributions are insufficient to meet the cost of the pension payments. Any surplus in the funds at the end of each year will be repaid back to the Home Office. Contributions in respect of ill health retirements are still the responsibility of the Council.

- **Local Government Pension Scheme (LGPS):** Other employees are eligible to join the LGPS. The Council pays contributions to a funded pension scheme from which employee pension benefits are paid out.

The pension costs included in the Statement of Accounts in respect of both the LGPS and the FPS have been prepared in accordance with IAS 19 Employee Benefits. The pension costs in respect of both the LGPS and FPS have been estimated by the Pension Fund actuary adviser and have incorporated an actual valuation of the accrued pension liabilities attributable to the Council as the scheme employer.

#### The Local Government Pension Scheme (LGPS)

The LGPS is accounted for as a defined benefits scheme:

- The liabilities of the Lincolnshire Pension Fund attributable to the Council are included in the Balance Sheet on an actuarial basis using the projected unit method – i.e. an assessment of the future payments that will be made in relation to retirement benefits earned to date by employees, based on assumptions about mortality rates, employee turnover rates etc. and projections of earnings for current employees.
- Liabilities are discounted to their value at current prices, using a discount rate based on long term UK Government bonds greater than 15 years.
- The assets of Lincolnshire Pension Fund attributable to the Authority are included in the Balance Sheet at their fair value:
  - quoted securities – current bid or last traded price.
  - unquoted securities – professional estimates.
  - unitised securities – current bid price.
  - property – market value.

The change in net pension's liability is analysed into the following components:

- Service cost comprising:
  - current service cost – the increase in liabilities as a result of years of service earned this year – allocated in the Comprehensive Income and Expenditure Statement to the services for which the employees worked.
  - past service cost – the increase in liabilities arising from current year decisions whose effect relates to years of service earned in earlier years – debited to the Surplus or Deficit on the Provision of Services in the Comprehensive Income and Expenditure Statement as part of Other Budgets.
  - net interest on the net defined benefit liability (asset), i.e. net interest expense for the Council – the change during the period in the net defined benefit liability (asset) that arises from the passage of time charged to the Financing and Investment Income and Expenditure line of the Comprehensive Income and Expenditure Statement. This is calculated by applying the discount rate used to measure the defined benefit obligation at the beginning of the period to the net defined benefit liability (asset) at the beginning of the

period – taking into account any changes in the net defined benefit liability (asset) during the period as a result of contribution and benefit payments.

- Remeasurements comprising:
  - the return on plan assets – excluding amounts included in net interest on the net defined benefit liability (asset) – charged to the Pensions Reserve as Other Comprehensive Income and Expenditure; and
  - actuarial gains and losses – changes in the net pensions liability that arise because events have not coincided with assumptions made at the last actuarial valuation or because the actuaries have updated their assumptions – charged to the Pensions Reserve as Other Comprehensive Income and Expenditure.
- Contributions paid to the Lincolnshire Pension Fund – cash paid as employer’s contributions to the pension fund in settlement of liabilities; not accounted for as an expense.

In relation to retirement benefits, statutory provisions require the General Fund Balance to be charged with the amount payable by the Authority to the pension fund or directly to pensioners in the year, not the amount calculated according to the relevant accounting standards. In the Movement in Reserves Statement, this means that there are transfers to and from the Pensions Reserve to remove the notional debits and credits for retirement benefits and replace them with debits for the cash paid to the pension fund and pensioners and any such amounts payable but unpaid at the year-end. The negative balance that arises on the Pensions Reserve thereby measures the beneficial impact to the General Fund of being required to account for retirement benefits on the basis of cash flows rather than as benefits are earned by employees.

The Council also pays any costs arising in relation to unfunded elements of pensions, paid to certain employees that have retired early and have been awarded discretionary compensation under the provisions of the Council’s early retirement policy. These costs are charged to Other Budgets in the Comprehensive Income and Expenditure Statement.

### 35. Accounting for Schools Income, Expenditure, Assets, Liabilities and Reserves.

In Lincolnshire, Local Authority education is provided in: Foundation, Voluntary Aided, Voluntary Controlled and Community Schools (all known as ‘maintained Schools’).

Income and Expenditure - All income and expenditure relating to maintained schools in Lincolnshire is shown in the Council’s Comprehensive Income and Expenditure Statement.

Non-Current Assets - Schools non-current assets will be accounted for under IAS 16 Property, Plant and Equipment. The standard defines non-current assets as “a resource controlled by the Council as a result of a past event and from which future economic benefits or service potential is expected to flow”.

If assets are owned by the Council or the governing body of the school or the future economic benefits are identified to sit with the Council, then the non-current assets will be recorded in the Balance Sheet. Where a school transfers to Academy status and has signed a long term (125 year) lease, the school is removed from the Council's Balance Sheet.

Assets and Liabilities - All assets and liabilities, excluding non-current assets which are covered above, relating to maintained Schools are included within the Council's Balance Sheet.

Reserves - The Council maintains specific earmarked reserves for schools balances. At year end, balances from Dedicated Schools Budgets, including those held by schools under a scheme of delegation, are transferred into the reserve to be carried forward for each school to use in the next financial year. This ensures that any unspent balances at the end of the financial year are earmarked for use by those schools as required by the Council's Scheme for Financing Schools approved by the Secretary of State for Education.

Any school with an overall cumulative deficit on its Dedicated Schools Grant (DSG) must produce a management plan detailing how it will return to a balanced position in the future. Accumulated deficits must be held in a Dedicated Schools Grant adjustment account rather than being charged to the General Fund. The Dedicated Schools Grant adjustment account is an unusable reserve. There is currently no accumulated deficit relating to schools' budgets funded by the Dedicated Schools Grant.

#### 36. Group Relationships.

The Council assesses on an annual basis, relationships with other bodies to identify the existence of any group relationships. A de minimis level of £20.000m aggregated gross turnover has been set for determining whether or not group accounts will be prepared.

The Council has not identified and does not in aggregate have any material interests in subsidiaries, associated companies or joint ventures and therefore is not required to prepare group accounts.

#### 37. Financial Instruments.

**Financial Liabilities.** Financial liabilities are recognised on the Balance Sheet when the Council becomes a party to the contractual provisions of a financial instrument and are initially measured at fair value and carried at their amortised cost. Annual charges to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement for interest payable are based on the carrying amount of the liability, multiplied by the effective rate of interest for the instrument. The effective interest rate is the rate that exactly discounts estimated future cash payments over the life of the instrument to the amount at which it was originally recognised.

All the Council's borrowings are carried at amortised cost and the amount presented in the Balance Sheet is the outstanding principal repayable (plus accrued interest) and the interest

charged to the Comprehensive Income and Expenditure Statement is the amount payable for the year according to the loan agreement.

No repurchase has taken place as part of a restructuring of the loan portfolio that included the modification or exchange of existing instruments. Therefore, gains and losses on the repurchase or early settlement of borrowing are credited and debited to Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement in the year of repurchase/settlement and spread over future years under statutory regulation.

Where premiums and discounts have been charged to the Comprehensive Income and Expenditure Statement, regulations allow the impact on the General Fund Balance to be spread over future years. Regulations state that the period to spread discounts is limited to a minimum period equal to the outstanding term on the replaced loan or 10 years if this is shorter. Premiums may be spread over the longer of the outstanding term on replaced loan or the term of the replacement loans, or a shorter period if preferred. The Council will spread premiums over the term that was remaining on the loan replaced and spread discounts in line with regulation. When matching premium and discounts together from a re-scheduling exercise, the Council's policy is to spread the gain/loss over a ten year period or the term that was remaining on the loan replaced if greater than ten years. The reconciliation of premiums/discounts charged to the Comprehensive Income and Expenditure Statement to the net charge required against the General Fund is managed by a transfer to or from the Financial Instruments Adjustment Account through the Movement in Reserves Statement.

The Council receives interest free funding from Salix Finance as part of a revolving fund to finance energy saving projects (Soft Loans Receivables). The benefit of a loan to the Council at a below-market rate of interest is treated as a grant or contribution receivable within the Comprehensive Income and Expenditure Statement. The benefit is measured as a difference between the cash actually advanced to the Council and the fair value of the loan on recognition, discounted at a comparable market rate of interest for a loan. The amortised cost of the loan in the Balance Sheet is reduced as the benefit has been stripped away. The reconciliation of amounts debited and credited to the Comprehensive Income and Expenditure Statement to the net gain required against the General Fund Balance is managed by a transfer to or from the Financial Instruments Adjustment Account in the Movement in Reserves Statement.

The Council has set a £50k de minimis limit to the value of soft loans receivable or the benefit calculated by discounting of interest rates. Below this amount the above accounting treatment for soft loans receivable is not applied and the soft loan receivable is shown in the accounts at its carrying value.

**Financial Assets.** Financial Assets are classified based on a classification and measurement approach that reflects the business model for holding the financial assets and their cash flow characteristics. There are three main classes that financial assets are measured at:

- Amortised Cost

- Fair Value Through Profit or Loss (FVPL); and
- Fair Value Through Other Comprehensive Income (FVOCI).

The Council's business model is to hold investments to collect contractual cash flows. Financial assets are therefore classified as amortised cost, except for those whose contractual payments are not solely payment of principal and interest (i.e. where the cash flows do not take the form of a basic debt instrument). These types of assets will be measured at fair value.

#### Financial Assets Measured at Amortised Cost

Financial Assets measured at amortised cost are recognised on the Balance Sheet when the Council becomes party to the contractual provisions of a financial instrument and are initially measured at fair value. They are subsequently measured at their amortised cost. Annual credits to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement for interest receivable are based on the carrying amount of the asset multiplied by the effective rate of interest for the instrument. For most of the financial assets held by the Council, this means that the amount presented in the Balance Sheet is the outstanding principal receivable (plus accrued interest) and interest credited to the Comprehensive Income and Expenditure Statement is the amount receivable for the year in the loan agreement.

The following financial assets held by the Council are measured at amortised cost using an effective interest rate that takes account of other considerations attributable to the asset over its lifetime such as premiums paid, or interest forgone. Interest payable in the Surplus or Deficit on the Provision of Services in the Comprehensive Income and Expenditure Statement will then be recognised on a smoothing effective interest rate basis over the life of the loan.

- Secondary Certificates of Deposit and Bonds - are purchased at an amount different to par and hence a price premium is usually incurred on purchase. The price of the instrument is the amortised cost at initial measurement (its fair value) debited to Investments on the Balance Sheet. This price premium is factored into the cash flows of the instrument over its life, that will result in a smoothing effective interest rate that when discounted will bring back cash flows to the price paid (initial measurement at fair value).

Interest is credited to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement at a marginally lower effective rate of interest than the rate receivable from the Instrument, with the difference serving to decrease the amortised cost of the loan in the Balance Sheet over its life.

Transaction costs paid to a custodian for purchasing these instruments are deemed as immaterial and hence charged directly to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement when incurred, not included within the amortised cost calculation of the instrument.

- Soft Loans – The Council can make loans to third parties at less than market rates (soft loans) for service objectives. When soft loans are made, a loss is recorded in the Comprehensive Income and Expenditure Statement (debited to the appropriate service), for the present value of the interest that will be foregone over the life of the instrument, resulting in a lower amortised cost than the outstanding principal.

Interest is credited to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement at a marginally higher effective rate of interest than the rate receivable from the third party recipients of the loans, with the difference serving to increase the amortised cost of the loan in the Balance Sheet. Statutory provisions require that the impact of soft loans on the General Fund Balance is the interest receivable for the financial year – the reconciliation of amounts debited and credited to the Comprehensive Income and Expenditure Statement to the net gain required against the General Fund Balance is managed by a transfer to or from Financial Instruments Adjustment Account in the Movement in Reserves Statement.

Any gains and losses that arise on the de-recognition of an asset are credited or debited to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement.

The Council has set a £50k de minimis limit to the value of soft loans or the loss calculated by the discounting of interest rates. Below this amount the above accounting treatment for soft loans is not applied and the soft loans are shown in the accounts at their carrying value.

#### Expected Credit Loss Model – for Assets Measured at Amortised Cost

The Council recognises expected credit losses on all of its financial assets held at amortised cost, either on a 12-month or lifetime basis. Only lifetime losses are recognised for trade receivables (debtors) that are more than 30 days past the due date, held by the Council. These are individually assessed to determine whether or not the trade receivable (debtors) are likely to default on their obligations.

Impairment losses are calculated to reflect the expectation that the future cash flows might not take place because the borrower could default on their obligations. Credit risk plays a crucial part in assessing losses. Where risk has increased significantly since an instrument was initially recognised, losses are assessed on a lifetime basis. Where risk has not increased significantly or remains low, losses are assessed on the basis of 12-month expected losses.

Where the counterparty for a financial asset is central government or a local authority for which relevant statutory provisions prevent default, then no loss allowance is required or recognised.

Impairment losses will be charged to the Financing and Investment Income and Expenditure line in the Surplus or Deficit on the Provision of Services and credited to the Financial Assets at Amortised Cost Loss Allowance.

The Council has set a de minimis level of £25k to the resultant impairment loss for financial assets at amortised cost, below which the impairment is deemed immaterial and not recognised.

The Council has a portfolio of a different types of loans measured at amortised cost. Where possible losses have been assessed on these loans on a collective basis as the Council does not have reasonable and supportable information that is available without undue cost or effort to support the measurement of expected losses on an individual instrument basis.

The Council has grouped the loans into the following groups for assessing loss allowances:

- Group 1 – treasury investments governed by the Council's Annual Investment Strategy for Treasury Investments. These are loans made to highly credit rated counterparties under the credit analysis followed within the Investment Strategy. As such they are deemed low risk, so the 12 month Expected Credit Loss model is used. The Historical Default Table issued by Credit Rating Agencies and provided by the Council's Treasury Advisors is used to calculate the expected 12 month impairment losses.
- Group 2 – loans or soft loans to third parties for Service Reasons. These types of loans tend to be higher risk as credit worthiness is often not the prime consideration in making the loan. They will be assessed on an individual basis taking into consideration external credit ratings, economic conditions impacting the third party, the current financial position and financial forecasts of the third party and any history of defaults or extended credit terms. Due to the high-risk nature, the lifetime Expected Credit Loss model would normally be followed for these loans (See \*Note below).
- Group 3 – loans to Council owned Companies for Service Reasons. These types of loans tend to be higher risk as credit worthiness is often not the prime consideration in making the loan. They will be assessed on an individual basis taking into consideration external credit ratings, economic conditions impacting the company, the current financial position and financial forecasts of company and any history of defaults or extended credit terms. Due to the high-risk nature, the lifetime Expected Credit Loss model would normally be followed for these loans.

\*Note

Where the Council makes loans to companies in financial difficulties to ensure continuation of vital services, fifty percent of the loan is thus deemed credit impaired on origination. This will mean that:

- as lifetime expected credit losses are taken into account in the cash flows used for calculating the effective interest rate, no loss allowance is needed on initial recognition.
- a loss allowance will then be built up on the basis of the cumulative change in lifetime expected credit losses since initial recognition.

- the annual impairment gain or loss will be the change in lifetime expected credit losses over the year.

#### Financial Assets Measured at Fair Value through Profit or Loss (FVPL)

Financial assets held by the Council that fall into this category include Constant Net Asset Value (CNAV) and Low Volatility Net Asset Value (LVNAV) Money Market Funds.

Financial assets are measured at FVPL where they fail to meet the business model and principal or interest tests of the other two classifications. For the Council, financial assets under this category meet the business model of collecting contractual cash flows, but the cash flows are not solely payments of principal or interest, for example they include dividend payments.

These funds are pooled investment funds that invest in short-term assets that aim to offer returns in line with money market rates and preserve the value of investments. They are instant access, whereby units of the fund are bought and sold, and dividends paid in accordance with daily yields returned, set at the end of each day. The Net Asset Value of these funds only vary by an insignificant amount due to changing values of the assets in the fund, therefore generally the price of the fund (fair value) will equal the carrying amount of units held.

Financial assets measured at FVPL are recognised on the Balance Sheet when the Council becomes a party to the contractual provisions of a financial instrument and are initially measured and carried at fair value. Fair value gains and losses are recognised as they arrive in the Surplus or Deficit on the Provision of Services, specifically within the Financing and Investment Income and Expenditure line of the Comprehensive Income and Expenditure Statement.

The Council has set a de minimis level to the adjustment to fair value of £50k for financial assets measured at fair value, below which the change in fair value will not be recognised and the asset will be held on the Balance Sheet at its carrying value.

Statutory provision as defined in SI 2018/1207 means that until 31 March 2024, English Local Authorities are prohibited from charging to a revenue account fair value gains or losses, unless the gain or loss relates to impairment or the sale of the asset. Instead that amount is charged to an account established solely for the purpose of recognising fair value gains and losses. The statutory provision has been extended to 31 March 2025. This statutory override will not be applicable for CNAV/LVNAV Money Market funds as gains and losses to fair value will be zero and will not impact on the revenue account.

Any gains and losses that arise on the de-recognition of the asset are credited or debited to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement.

#### Expected Credit Loss Model – For Assets Measured at Fair Value through Profit and Loss

The impairment requirements do not apply to financial assets classified as 'fair value through profit or loss', as current market prices are considered to be an appropriate reflection of credit risk, with all movements in fair value (including those relation to credit risk) impacting on the carrying amount being posted to the Financing and Investment Income and Expenditure line in the Comprehensive Income and Expenditure Statement as they arise.

#### Financial Assets Measured at Fair Value through Other Comprehensive Income (FVOCI)

Financial assets are measured at FVOCI when the business model for holding the asset includes collecting contractual cash flows and selling assets. The Council does not hold any financial assets that meet this definition.

In line with the Code however, the Council has decided to designate some small equity holdings in companies held for service reasons to the category of FVOCI instead of FVPL. This designation is irrevocable and deemed to be a reliable accounting policy for these financial assets, based on the following reasons:

- The holdings are equity instruments as defined by the Code to exclude puttable shares (e.g. those where the issuer has a contractual obligation to exchange the shares for cash if the holder exercises an option for the return of their investment).
- They naturally fall into the FVPL classification of investments.
- The shares are held for a clear service benefit and not held for trading.
- Future gains or losses are expected to be insubstantial.

Assets designated at FVOCI will be carried in the Balance Sheet at Fair Value, with dividends credited to the Surplus or Deficit on the Provision of Services when the right for the Council to receive the payment is established. Movements in fair value will be credited to the Other Income and Expenditure Account and released to the General Fund. The impact on the General Fund will be removed through Movement in Reserves Statement to the Financial Instruments Revaluation Reserve. Gains or losses will be charged directly to the General Fund via the Financing and Investment Income and Expenditure in the Surplus or Deficit on the Provision of Services.

The Council has set a de minimis level to the adjustment to fair value of £50k for financial assets measured at fair value, below which the change in fair value will not be recognised and the asset will be held on the Balance sheet at its carrying value.

#### Expected Credit Loss Model – For Assets Measured at Fair Value through Other Comprehensive Income

The Council recognises expected credit losses on financial assets measured at FVOCI either on a 12-month or lifetime basis depending on an individual assessment of the credit risk of each financial asset as follows:

Has credit risk increased significantly since initial recognition?

- No: 12-month credit loss model.
- Yes: lifetime credit loss model.
- No information available to assess: lifetime credit loss model.

Consideration will be made to external credit ratings, economic conditions impacting the company, the current financial position and financial forecasts of company and any history of defaults or extended credit terms when assessing the credit risk of these assets.

Impairment losses will be charged to Other Comprehensive Income and Expenditure and credited to the Financial Instruments Revaluation Reserve.

Where financial assets have been designated into the FVOCI category they are outside the scope of impairment for the same reasons that FVPL assets are.

The Council has set a de minimis level of £25k to the resultant impairment loss for financial assets at FVOCI, below which the impairment is deemed immaterial and not recognised.

### 38. Fair Value Measurement.

Some of the Council's non-financial assets, such as surplus assets and investment properties and some of its financial instruments, are measured at fair value. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement assumes that the following takes place either:

- In the principal market for the asset or liability, or
- In the absence of a principal market, in the most advantageous market for the asset or liability.

When measuring the fair value, the Council would use the assumptions of market participants when pricing the asset or liability whilst acting in their economic best interest.

On fair value measurement, the Council takes into account the market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use. The Council uses the appropriate valuation techniques appropriate for the asset, maximising the use of relevant observable inputs and minimising unobservable inputs.

For financial instruments measured in fair value (FVPL and FVOCI) is therefore based on the following techniques:

- instruments with quoted market prices – the market price
- other instruments with fixed and determinable payments – discounted cash flow analysis.

The inputs to the measurement techniques are categorised in accordance with the following three levels:

- Level 1 - quoted prices (unadjusted) in active markets for identical assets or liabilities that the authority can access at the measurement date.

- Level 2 - inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly.
- Level 3 – unobservable inputs for the asset or liability.
