

LINCOLNSHIRE WASTE PARTNERSHIP

13 April 2015

SUBJECT :	JOINT MUNICIPAL WASTE MANGEMENT STRATEGY (JMWMS)
REPORT BY:	SEAN KENT
CONTACT NO:	01522 554833

BACKGROUND INFORMATION

Local Authorities have a fundamental role in delivering sustainable waste outcomes. In recognition of the fact that the division of responsibilities between the Waste Disposal and Collection Authorities can make sustainable waste management more difficult, the Waste Strategy 2000 set out the need for Authorities in areas where there are two tiers of local government to work closely together. Waste Strategy 2000 encouraged all Authorities to produce comprehensive municipal waste management strategies and included a commitment to make this a statutory requirement.

The present JMWMS was published in 2008 and this is expected to be refreshed every five years.

The LWP received a JMWMS report on the Strategic Environmental Assessment (SEA) at its meeting on the 17 October 2013. (see Appendix A). The purpose of this report was to present the scoping stage of the SEA process (see Appendix B). It provided the context and baseline information and a starting point from which to appraise the effects of implementing the JMWMS.

Subsequently, the progression of a JMWMS has subsequently been delayed due to the extensive considerations regarding the Mixed Dry Recycling contract. This report is to highlight the need the need to re-start this process, confirm the staff resources and to update the previous work undertaken on the SEA.

STRATEGY STAGES

The key stages which will need to be completed are:

- Inception
- Data collection – waste statistics, growth, present performance
- Legal obligations and guidance that will shape the Strategy period.
- Formation of strategy objectives, through workshops with key stakeholders
- Preparation of draft strategy and SEA Scoping
- Consult on draft strategy and SEA scope
- Refine strategy, undertake SEA
- Council approval process of the strategy and SEA
- Publish final Strategy and SEA

It is expected that the above could take up to 18 months dependant on the periods of approval process within the Authorities. The only statutory period is the 5 week statutory consultation period on the SEA scoping.

The staff resourcing and the use of a consultant needs to be carefully considered for the drafting of the Strategy and the SEA, with milestone reporting to the LWP. Previously there was an action plan of resourcing the production of the Strategy which will need to be considered and updated accordingly (Appendix C).

RECOMMENDATION

The Lincolnshire Waste Partnership is recommended to endorse:

1. The Officer Working Group is tasked to progress the production of the JMWMS, review the previous work on the SEA and to report regularly to the Partnership on progress.
2. The resourcing of County and District Officers to produce the JMWMS before the end of 2017.

LINCOLNSHIRE WASTE PARTNERSHIP

17 OCTOBER 2013

SUBJECT:	JOINT MUNICIPAL WASTE MANAGEMENT STRATEGY - SCOPING REPORT FOR THE STRATEGIC ENVIRONMENTAL ASSESSMENT
REPORT BY:	STRATEGY REVIEW GROUP
CONTACT NO:	IAN TAYLOR – 01522 552376

Background Information

A statutory requirement of the work to develop the new Joint Municipal Waste Management Strategy (JMWMS) is to undertake a Strategic Environmental Assessment (SEA) of the impact the JMWMS may have on the wider environment, and to make sure it complies with UK and European legislation.

The County Council have commissioned Mouchel to undertake this work, and a copy of the draft Scoping Report on the SEA is attached to this report.

The purpose of this report is to present the scoping stage of the SEA process. It provides the context and baseline information and a starting point from which to appraise the effects of implementing the JMWMS.

To provide a sound basis for analysis, the report sets out:

- other plans, programmes and environmental objectives relevant to the JMWMS;
- baseline information, either collected or still needed, with notes on sources and any problems encountered in gathering the information;
- the key environmental considerations and opportunities; and
- a set of SEA objectives that take into account the relationship between the JMWMS and the objectives of other plans and programmes, along with the findings of the baseline information review. These objectives will form the basis of the SEA framework within which the assessment of the JMWMS will be undertaken.

Mouchel will give a presentation on the Scoping Report and the SEA process and answer any questions members within the Lincolnshire Waste Partnership may have.

Section 2.3 of the draft SEA outlines in very broad terms the scope of the JMWMS

and includes a reference to the development of waste management facilities. The Strategy Review Group have included this as development of the strategy may need to consider the provision of household and trade waste recycling facilities, a Material Reclamation Facility (MRF) for Lincolnshire and other waste-related amenities.

However Table 5-1 and section 9 Appendix A do not include the topics that would need to be included should the development of waste management facilities be retained in the scope of the JMWMS.

Section 9.1 also lists documents related to each partner authority, and LWP members are asked to check that only current and relevant documents have been included and to make such additions and deletions as are required.

This is also an opportunity for members of the Lincolnshire Waste Partnership to comment on what has been included and to make suggestions as to any areas and issues they feel have been missed off or other areas they would like to see considered as a part of the SEA.

RECOMMENDATIONS

The Lincolnshire Waste Partnership is recommended to:

- I. Receive the presentation;
- II. Confirm the inclusion of the development of waste management facilities in the scope of the JMWMS;
- III. Each member of the Lincolnshire Waste Partnership to check the documents related to their authority that have been included in Section 9.1 and to make such changes as are required (by not later than 15 November);
- IV. Raise any other issues they may have with the Scoping Report of the draft Strategic Environmental Assessment of the Joint Municipal Waste Management Strategy (either at the meeting or in writing by not later than 15 November).

1 Introduction

1.1 Background

Lincolnshire County Council (LCC) commissioned Mouchel to undertake a Strategic Environmental Assessment (SEA) of the replacement Joint Municipal Waste Management Strategy (JMWMS) in July 2013.

LCC is a member of the Lincolnshire Waste Partnership (LWP) which is a body formed of LCC, the Environment Agency and the 7 district councils within Lincolnshire:

- Boston Borough Council
- City of Lincoln Council
- East Lindsey District Council
- North Kesteven District Council
- South Holland District Council
- South Kesteven District Council
- West Lindsey District Council

The current JMWMS for Lincolnshire was published by the LWP in June 2008, with the aim of providing information on the following:

- The current and future legal obligations that the partnership needs to meet;
- The waste management services that are currently provided;
- How the Partnership plans to meet the targets by reducing the amount of waste that is produced, increasing the amount of waste that is recycled and recovered, and minimising the amount of residual waste that is landfilled; and,
- How the Partnership plans to implement this strategy.

Since 2008, Lincolnshire has made significant progress towards achieving these aims through securing a 25 year contract with FCC Environment in March 2011, for the disposal of residual Municipal Solid Waste (MSW) and constructing a 150,000 tonne per annum Energy from Waste (EfW) facility at North Hykeham in Lincoln.

A revised waste strategy is therefore necessary to address the present waste management challenges in Lincolnshire and to address its future needs.

1.2 The SEA Process

The SEA process ensures that the environment is integral to the consideration of plans, policies and programmes. It ensures that significant environmental effects are identified, assessed, mitigated, communicated to decision-makers, monitored and that opportunities for public involvement are provided.

1.3 The Scoping Report

The purpose of this report is to present the scoping stage of the SEA process. It provides the context and baseline information, a starting point from which to appraise the effects of implementing the JMWMS.

To provide a sound basis for analysis, the report sets out:

- other plans, programmes and environmental objectives relevant to the JMWMS;
- baseline information, either collected or still needed, with notes on sources and any problems encountered in gathering the information;
- the key environmental considerations and opportunities; and
- a set of SEA objectives that take into account the relationship between the JMWMS and the objectives of other plans and programmes, along with the findings of the baseline information review. These objectives will form the basis of the SEA framework within which the assessment of the JMWMS will be undertaken.

1.4 Consultation

It is important that the scope of the SEA is appropriate for the documents being produced. For this reason, consultation is a critical step in the scoping process. The aim of the consultation on the Scoping Report is to involve and engage with statutory consultees and other key stakeholders on the scope of the assessment, in the light of the information it contains. This Scoping Report will be subject to a five-week consultation. In considering the report, consultees will be asked to address the following questions:

- Question 1 - Have all relevant plans, policies and programmes been considered?
- Question 2 - Does the baseline information reflect the current situation in the JMWMS area or are there additional social, environmental or economic factors that should be considered?
- Question 3 - Do the issues identified in this report cover all the significant environmental and sustainability issues relevant to the JMWMS area?
- Question 4 - Do the SEA objectives reflect the right aspirations for development of more sustainable approaches to waste management?

1.5 Legislative Requirements

1.5.1 Strategic Environmental Assessment

In the European Union an SEA is required for all member states on all plans and programmes by European Community Directive (2001/42/EC) ‘on the assessment of the effects of certain plans and programmes on the environment’, known as the ‘SEA Directive’. The Directive is implemented in England through the Environmental Assessment of Plans and Programmes Regulations (Statutory Instrument (SI) 1633 2004).

An SEA of a Waste Strategy is a minimum requirement of Defra, with authorities obliged to consider whether a wider Sustainability Appraisal (SA) is necessary.¹

1.5.2 Waste and Emissions Trading Act

The Waste and Emissions Trading Act 2003 requires two-tier areas such as Lincolnshire to have a joint strategy for the management of municipal waste in place before April 2005. Waste Management Strategies require a review every 5 years to ensure that they remain current.¹

¹ Defra, Guidance on Municipal Waste Management Strategies, July 2005

2 Lincolnshire Joint Waste Management Strategy

2.1 Study Area

The study area covers the county of Lincolnshire, incorporating the districts of Boston, City of Lincoln, East Lindsey, North Kesteven, South Holland, South Kesteven and West Lindsey.

The county is predominantly rural and has a geographical area of 2,309 sq miles. The main urban area is around the city of Lincoln which is a cathedral town with a rich history dating back to Roman times. Other centres of population include Gainsborough, Louth, Mablethorpe, Skegness, Boston, Sleaford, Grantham, Stamford and Spalding.

Lincolnshire's coastline contains some of the country's most versatile agricultural land, a successful tourism industry and internationally-renowned nature conservation sites.

2.2 Purpose and Objectives of the JMWMS

The JMWMS seeks to provide a mechanism by which joint working by the districts and LCC, as well as the Environment Agency, can be achieved to deliver sustainable waste management services and establish best value waste management practices. The framework provided by the JMWMS allows the LWP to continually improve the waste services offered, minimise costs and meet challenging recycling and landfill diversion targets.

The LWP has developed and agreed a set of high level objectives to assist in delivering the current JMWMS and these are set out below:

1. To prevent the growth in municipal waste by promoting waste reduction and reuse initiatives to ensure no more than 225kg of residual household waste per person per year is produced by 2020.
2. To promote waste awareness through co-ordinated public education and awareness campaigns, and effective community engagement.
3. Across Lincolnshire to achieve 55% recycling and composting by 2015.
4. Across Lincolnshire to achieve a uniform dry recyclables waste stream by 2013.
5. To increase progressively the recovery and diversion of biodegradable waste from landfill, to meet and exceed the Landfill Directive diversion targets.
6. To ensure that residual waste treatment supports energy recovery and other practices higher up the waste hierarchy.
7. To deliver best value for money, waste management services, addressed on a countywide basis.
8. To engage with local businesses to encourage the reduction and recycling of commercial waste.
9. To engage actively, lobby and work with local, national, governmental and other organisations on sustainable waste management issues.

10. As Local Authorities to set an example by preventing, reusing, recycling and composting our own waste and using our buying power to encourage positively sustainable resource use.

2.3 Scope of the JMWMS

The new JMWMS will focus on a range of waste management measures as follows:

- kerbside recycling;
- garden waste collection;
- minimising residual waste;
- increasing re-use;
- maximisation of income stream;
- wider integrated working across Lincolnshire;
- food waste collection;
- reduced carbon impacts; and
- minimising contamination.

The JMWMS will also consider wider issues around population growth and how waste management will need to respond commensurately in an environmental and sustainable manner. The JMWMS may also consider the development of waste management facilities although substantial development was achieved within the current waste management strategy.

3 SEA Methodology

3.1 Approach to the SEA

This scoping report has been developed in accordance with guidance set out in the ‘Practical Guide to Strategic Environmental Assessment Directive’ (Department for Communities and Local Government (DCLG), previously Office of the Deputy Prime Minister; 2005). The DCLG SEA guidance outlines five sequential steps, which are listed in Table 3-1. This report presents the findings of Task A1 to A4 of the SEA process.

Table 3-1 SEA Stages

SEA Stages	SEA Tasks
Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope.	• A1: Identifying other relevant policies, plans and programmes
	• A2: Collecting baseline information
	• A3: Identifying environmental considerations
	• A4: Developing the SEA objectives
	• A5: Consulting on the scope of the SEA
Stage B: Developing and refining options and assessing effects	• B1: Testing the JMWMS objectives against the SEA objectives
	• B2: Developing the alternatives
	• B3: Predicting the effects of the JMWMS including alternatives
	• B4: Evaluating the effects of the JMWMS including alternatives
	• B5: Considering ways of mitigating adverse effects
	• B6: Proposing measures to monitor the environmental effects of implementing the JMWMS
Stage C: Environmental Report	• C1: Preparing the Environmental Report
Stage D: Consulting	• D1: Consulting on the JMWMS and the Environmental Report
	• D2 (i): Assessing significant changes
	• D2 (ii): Appraising significant changes resulting from representations
	• D3: Making decisions and providing information
Stage E: Monitoring the significant effects of implementing the plan on the environment	• E1: Finalising aims and methods for monitoring
	• E2: Responding to adverse effects

The DCLG guidance has been used in conjunction with other best practice guidelines including Sustainability Appraisal and the Historic Environment (English Heritage).

In addition, Defra's 'Guidance on Municipal Waste Management Strategies' has also been considered.

3.2 Habitats Regulations Assessment

The JMWMS is a high level document which will potentially consider the development of waste infrastructure, and therefore could require assessment under the Habitats Regulations. If this is undertaken, it would be possible to determine whether the strategy could lead to potentially significant effects on Natura 2000 sites.

-

DRAFT

4 Identifying Other Relevant Policies, Plans and Programmes – Task A1

4.1 Introduction

The first stage of the scoping process is to identify and review other relevant policies, plans and programmes (PPP). The JMWMS will be set in the context of a wide range of other relevant plans, programmes and environmental objectives both within and outside LCC's jurisdiction.

The purpose of the review exercise is to establish and take account of any environmental objectives at international, national, regional, sub-regional, or local levels that will inform the SEA and therefore the development of the JMWMS. It will ensure that any potential policy conflicts or synergies can be identified at an early stage. This provides an opportunity for the JMWMS to be adapted to reduce or eliminate potential conflicts and enhance synergies.

A wide range of PPPs has been identified during the scoping stage of the SEA and these are set out in Appendix A.

-

5 Baseline Information – Task A2

5.1 Introduction

The next task in the SEA covers the collection of baseline information which seeks to establish the current environmental status of the study area covered by the JMWMS, and to identify trends in environmental parameters. This information is then used to assess current environmental and sustainability issues that are evident in the area. The baseline information is intended to provide a basis for predicting and monitoring the effects of implementation of the strategy.

5.2 Environmental Topics

In order to focus the SEA on key issues that require detailed analysis, an initial sifting exercise has been undertaken to avoid including environmental topics (including baseline information or plans and programmes concerning these themes), which are of no clear relevance to the JMWMS. The environmental components that are unlikely to be significantly affected by the JMWMS have therefore been ‘scoped out’ of the assessment at this stage. Other issues can be added, either during the scoping stage or later on, if it transpires that the JMWMS may have a significant effect on them. Table 5-1 below details individual environmental topics relevance to the JMWMS and whether it has been ‘scoped in’ or ‘scoped out’ of the SEA.

Table 5-1 Environmental Topics scoped into, or out of, the SEA Process

Topics Covered in the SEA	Relevance to the JMWMS	Scoped In/ Out
Climatic Factors	Waste management decisions informed by the Strategy have the potential to impact on Lincolnshire’s Greenhouse Gas (GHG) emission levels. For example, reducing the mileage of the collection fleet would result in a fall in carbon emissions. Alternatively, increasing the percentage of recyclables captured within the collection regimes will move waste up the hierarchy and in all likelihood reduce carbon emissions.	In
Air Quality	The JMWMS will need to consider any impacts of operational processes on air quality, particularly due to the nature of waste collections which rely on vehicles and the transport network. Local air quality is largely influenced by transport and HGVs are an important source of both NO ₂ and PM ₁₀ emissions. Furthermore, the effects of composting may have an impact on air quality which will need to be assessed accordingly.	In
Noise	Waste management is unlikely to have significant effects on noise levels due to the nature of the strategies proposed in the JMWMS. These do not involve any construction, but instead promote recycling, garden waste collection and composting. Noise has therefore been scoped out of the process at this stage.	Out
Biodiversity, Flora and Fauna	Biodiversity, flora and fauna is unlikely to be significantly affected by the JMWMS as there are no policies or objectives that will influence land use or management. Biodiversity, flora and fauna has therefore been scoped out of the process at this stage.	Out

Geology and Soils	Measures contained in the JMWMS involve collection of garden waste and composting may have the potential to affect the composition of soils. An increase in the collection of green waste and the subsequent creation of compost can therefore potentially benefit soils.	In
Water	Water Quality and Flood Risk It is unlikely the JMWMS will impact on both surface and groundwater quality and supply in Lincolnshire. In addition, it is not considered that the waste management processes being promoted in the JMWMS will have an impact in terms of flood risk. The water environment has therefore been scoped out of the process at this stage.	Out
Population	The JMWMS will need to consider the needs of the existing and future population of Lincolnshire, particularly in relation to promoting waste awareness. Waste management decisions may have potential impacts on transport networks, and on the local economy.	In
Material Assets	Waste management operations may impact on material assets, related to transport and social infrastructure e.g. hospitals, roads, residential areas etc.	In
Cultural Heritage	Waste management operations may change the pattern and frequency of waste collections which may impact on areas of heritage value. For example, the setting of listed buildings and Historic Landscape Areas may be affected by the location of wheeled bins or other refuse collection infrastructure. If these were placed in an inappropriate location the setting of the historic asset could be adversely affected.	In
Landscape	The visual impact of waste collection options, whilst possibly having an impact upon listed buildings, as detailed above, is unlikely to be significant when compared with the wider landscape. Landscape has therefore been scoped out of the process at this stage.	Out

The baseline data collected in relation to all the topics above can be found in Appendix B of this scoping report. A summary of the key environmental issues in Lincolnshire which have been identified from the review of the policies, plans and programmes and through an assessment of the baseline data can be found in Section 6 of this report.

5.3 Data Limitations

It should be noted that there is a large amount of environmental information available; this assessment has selected information on the basis that it may be influenced or affected by the JMWMS.

DRAFT

6 Identifying Environmental Issues – Task A3

The review of PPPs and collection of baseline data has assisted in identifying environmental considerations that should be taken into account during the development of the Lincolnshire JMWMS. Table 6-1 below summarises the key environmental considerations that have been identified to date. It should be noted this is an on-going process that will continue as the SEA and JMWMS develops. It should be noted that not all of the key environmental considerations that are present within Lincolnshire have been addressed in Table 6-1 and this is because the JMWMS will have very limited or insignificant ability to influence decision making relative to these parameters. These have been identified below:

- Healthcare priorities - the strategy will not be able to influence matters relating to human health such as promoting active lifestyles or reduced smoking.
- Tourism - whilst it is acknowledged that tourism is a major factor of the Lincolnshire economy, the JMWMS will not be able to influence the promotion of additional measures to develop tourism further in the county, nor will tourism be likely to be discouraged through any measures proposed and promoted by the JMWMS.
- Mineral Extraction – although Lincolnshire has valuable mineral assets that form an important contributor to the local economy, it is not considered that the JMWMS will be able to influence the use, preservation or development of mineral assets further through any of the policies that it promotes.

Table 6-1 Key Environmental Considerations

Key Environmental Considerations	Opportunities / Constraints for the Lincolnshire JMWMS
Climatic Factors	
CO ₂ emissions are lower in Lincolnshire than in the East Midlands region in 2011. This figure has reduced from levels recorded in 2005.	The JMWMS will need to ensure that it promotes waste management activities that minimise impacts on climate change, minimise GHG emissions and enable the wise use of natural resources. This could be through reduced waste miles for the collection fleet or more efficient use of materials.
Planning applications for renewable energy measures have increased although the visual impact of these measures is being challenged.	Lincolnshire has good renewable energy potential. It is important that waste management decisions consider the current and future renewable energy infrastructure. There is the potential to increase capacity from renewable energy resources through biomass initiatives which can involve the use of municipal waste and/or garden waste.
Climate change could have potential impacts on Lincolnshire's coastal areas, agricultural areas and transport infrastructure.	The JMWMS will need to ensure that it promotes waste management activities that minimise impacts on climate change, minimise GHG emissions and enable the wise use of natural resources.
Air Quality	
Air quality is considered to be good, although there are 6 AQMAs within the county, established primarily as a result of pollution from traffic emissions.	The JMWMS should seek to ensure that its operations do not impact negatively on the ability of Lincolnshire to retain its current levels of air quality. The transport implications of its waste management services will need to be carefully examined to consider opportunities for contributing towards the improvement of local air quality.
Geology and Soils	
Lincolnshire contains a wide variety of soils that are used to support an important agricultural sector.	The JMWMS will need to consider the potential effects of objectives and actions on local soils. At a small scale, garden waste collections and increased composting activities, for example, could provide positive

Key Environmental Considerations	Opportunities / Constraints for the Lincolnshire JMWMS
	benefits for soil composition or the promotion of home composting could improve local soil quality.

DRAFT

Key Environmental Considerations	Opportunities / Constraints for the Lincolnshire JMWMS
Population	
<p>The population of Lincolnshire has increased by 63,200 people in the ten year period to 2012. A breakdown of this data shows that the county continues to have an ageing population and is less ethnically diverse than other areas.</p>	<p>The JMWMS will need to consider the impact of rising population levels and how the waste generated will be addressed. The JMWMS will need to understand the main areas affected and ensure that waste management operations are planned accordingly.</p>
<p>Deprivation across Lincolnshire has worsened slightly from 2007 to 2010.</p>	<p>The JMWMS will need to ensure that its proposed measures do not exacerbate deprivation levels and where possible, provide improvements to all residents.</p>
<p>The economy of Lincolnshire has not been affected in the economic downturn to the extent that has occurred nationally. However, many businesses have reported difficult trading conditions.</p>	<p>There is an opportunity for the JMWMS to respond positively to the economic climate in determining how its operations will be organised and run. There is also an opportunity to provide training and apprenticeships to young people or those looking for work to expand their skills base.</p>
Material Assets (includes critical infrastructure, transport, access, housing, land-use and waste)	
<p>Increasing demand on the transport network and an increase in concern around the environmental impact of traffic.</p>	<p>It is essential to ensure that the JMWMS considers issues around waste transportation to both enable appropriate waste management across the county and limit its impact where possible.</p>
<p>Waste collection and disposal results in lorry movements into and out of the county to waste management facilities. Regular collections are required from households and with the number of households increasing and the total amount of waste increasing; there is the potential for an impact on transport.</p>	<p>It is essential to ensure that the JMWMS considers issues around waste transportation to enable appropriate waste management across the county.</p>
<p>New housing and employment sites being identified across the county,</p>	<p>It is essential to ensure that the JMWMS considers such issues regarding the increasing number of households and corresponding increases in waste generation and waste transportation to enable appropriate waste management across the County.</p>

Key Environmental Considerations	Opportunities / Constraints for the Lincolnshire JMWMS
	The JMWMS will need to ensure that waste operations are flexible and can respond to new developments across the county. Any waste related matters that can be influenced at the planning stage for new housing and employment development, that could have positive impacts on the environment should be considered.
Lincolnshire contains a significant amount of best and most versatile agricultural land and is a large producer of produce.	The JMWMS needs to consider protection for agriculture and the infrastructure required for transportation. In addition, the ability of agricultural operations to contribute to elements of the waste strategy, such as composting activities, should be explored through the JMWMS.
Cultural Heritage	
Lincolnshire has a large number of heritage assets including 162 conservation areas, 7200 listed buildings and 478 scheduled ancient monuments across the county. There are also 42 Historic Character Zones.	The JMWMS should ensure that waste management operations should not have adverse visual or other impacts on the heritage resource of the County and where possible enhance/ protect it further.

7 Developing the Strategic Environmental Assessment Framework

This scoping report has taken into account the wide range of plans and programmes in Appendix A and information collected in chapter 5 to produce a robust list of SEA objectives covering the topic areas listed in the SEA Directive below:

- Climatic Factors;
- Air Quality;
- Geology and Soil;
- Population;
- Material Assets; and
- Cultural Heritage.

As detailed in Table 5-1, the SEA Directive topics Noise, Water and Landscape have been scoped out of the assessment at this stage and no further assessment of these topics will take place. As such there are no SEA objectives relating to noise, water and landscape.

The SEA framework provides a method for describing, analysing and comparing the environmental and sustainability effects of plans and policies. A series of SEA objectives has been developed, taking into account the relationship between the JMWMS and the objectives of other plans and programmes, along with the findings of the review of baseline data. These objectives will form the basis for the SEA framework within which the evaluation of the JMWMS objectives and actions will be carried out. These are contained within Table 7-1 below.

These SEA objectives will be sent out for consultation with the statutory bodies and relevant stakeholders to ensure that all relevant plans and programmes have been considered and incorporated.

Following consultation, the SEA objectives will be updated and will undergo compatibility testing which will indicate if they are compatible with each other. The outcome of the testing does not invalidate the objectives, but instead identifies the areas which may require particular attention when developing alternative approaches in the future.

Potential indicators relating to each SEA objective are also set out in Table 7-1. It is anticipated that the indicators will be reviewed and revised during the SEA process and take into account comments received during consultation on the scoping report and any issues arising from the assessment of the JMWMS.

Table 7-1 SEA Objectives and Potential Indicators

SEA Objectives	Potential Indicators	Responsible Authority for collecting information
Climatic Factors		
1. Contribute to reduced carbon emissions from energy use.	Amount of fuel used in waste management collections per annum.	Local Authority
2. Waste management collection infrastructure contributes to the circular economy through the use of recycled materials.	Percentage recycled content of new waste/recycling containers per annum	Local Authority
Air Quality		
3. To prevent deterioration of air quality within the county and where possible make improvements.	Percentage of Euro VI engines, electric vehicles, hybrid vehicles, biogas or hydrogen fuelled vehicles operating on behalf of the local authorities in a waste management related capacity per annum	Local Authority
Geology and Soil		
4. Promote the conservation and wise use of land, and protect soil quality and quantity.	Tonnes of green waste that is used as compost per annum	Local Authority
	Fly tipping incidents per annum	Environment Agency/Local Authority
Population		

SEA Objectives	Potential Indicators	Responsible Authority for collecting information
5. To encourage economic investment through waste management.	Monetary value of new waste management infrastructure developed per annum	Local Authority
6. To ensure that the growing population of Lincolnshire does not lead to an increase in the percentage of waste disposed of.	Total percentage of waste recycled and composted per annum	Environment Agency/Local Authority
	Total percentage of waste recovered per annum	Environment Agency/Local Authority
7. To encourage material re-use/waste avoidance.	Waste generated per capita per annum	Environment Agency/Local Authority
8. To ensure sustainable use of resources through effective waste management.	Amount of energy generated by the EfW (as a measure of non-combustible diversion rates) per annum	Local Authority
	Amount of heat exported from the EfW.	Local Authority
	Percentage of contaminated material per month (as an indicator of resources lost to less sustainable management)	Local Authority
Material Assets		
9. To facilitate opportunities for recycling within residential development.	Proportion of housing scheme planning approvals where dedicated waste management storage considerations are included in the application per annum	Local Planning Authority
10. To protect agricultural resources from waste management activities	Area of agricultural land lost to waste management uses per annum	Local Authority
Cultural Heritage		

SEA Objectives	Potential Indicators	Responsible Authority for collecting information
11. Protect and enhance the historic environment, heritage assets and their setting (including architectural and archaeological heritage)	Support or neutral opinions on planning applications for waste management infrastructure from consultees in the cultural heritage sectors	Local Planning Authority
	New waste collection programmes implemented with consideration for impacts upon cultural assets per annum	Local Authority

DRAFT

8 Next Steps

8.1 Consultation

The SEA Regulations require that the following three statutory consultation bodies be consulted with regards to the scope and level of detail of the environmental information contained within the SEA scoping report. The consultation bodies are;

- The Environment Agency;
- Natural England; and
- English Heritage.

It is also considered appropriate for other bodies, which reflect a balance of social, economic and environmental interests, to be consulted. These will be identified as the new JMWMS is prepared.

The scoping report will be sent to all the Statutory Consultees, as set out above, for a five week consultation period and all consultation responses received will be used to inform the SEA Environmental Report (Stage B). The scoping report will be made available on the local authority web site.

8.1.1 Next Steps

During Stage B (See Table 3.1) of the SEA process the objectives and actions of the JMWMS will be appraised by the SEA Framework and all the results, recommendations and mitigation will be summarised in an Environmental Report and incorporated into the JMWMS where appropriate.

9 Appendix A: Relevant Plans, Policies and Programmes

Lincolnshire County Council Joint Municipal Waste Management Strategy
Strategic Environmental Appraisal Scoping Report

Table 9-1 Relevant Plans, policies and programmes

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
International			
World Heritage Convention in 1972.	12	To ensure, as far as possible, the proper identification, protection, conservation and presentation of the world's heritage, the Member States of UNESCO adopted the World Heritage Convention in 1972. The Convention foresees the establishment of a "World Heritage Committee" and a "World Heritage Fund". Both the Committee and the Fund have been in operation since 1976.	Cultural Heritage
European Convention on the Protection of the Archaeological Heritage revised 1985	12	<ul style="list-style-type: none"> • The aim of this (revised) Convention is to protect the archaeological heritage as a source of the European collective memory and as an instrument for historical and scientific study. • To this end shall be considered to be elements of the archaeological heritage all remains and objects and any other traces of mankind from past epochs: the preservation and study of which help to retrace the history of mankind and its relation with the natural environment; for which excavations or discoveries and other methods of research into mankind and the related environment are the main sources of information; and which are located in any area within the jurisdiction of the Parties; • The archaeological heritage shall include structures, constructions, groups of buildings, developed sites, moveable objects, monuments of other kinds as well as their context, whether situated on land or under water. 	Cultural Heritage
UN Conference on Environment and Development, Rio 1992	All	Requirement that new development should be sustainable.	General
Kyoto Protocol to the UN Framework	1, 2	Improved energy efficiency. Lower carbon intensive forms of energy supply (energy and transport). Reduced industrial process emissions. Improved agricultural practices and livestock management. Management of biodegradable waste.	Climatic Factors

Strategic Environmental Appraisal Scoping Report

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
Convention on Climate Change (1997)			
Report of the World Summit on Sustainable Development. UN Johannesburg (2002)	All	The report aims to reverse the trend in the loss of natural resources, encouraging waste reduction and producer responsibility. It also plans to tackle climate change and energy and to promote sustainable communities.	General
European			
Waste Framework Directive (2008/98/EC)	10, 11	Repeals the previous directive 2006/12 on waste and directives 75/439/EEC and 91/689/EEC regarding waste oils and hazardous waste respectively. It introduces new provisions in order to boost waste prevention and recycling as part of a waste hierarchy and clarifies key concepts namely, the definitions of waste, recovery and disposal and lays down appropriate procedures applicable to by-products and to waste that ceases to be waste.	Waste, Material Assets
Landfill Directive (1999/31/EC)	10, 11	Sets out sets mandatory targets for the reduction of biodegradable municipal waste sent to landfill.	Waste, Material Assets
Directive on packaging and packaging waste (94/62/EEC)	10, 11	This Directive aims at reducing packaging waste in the European Community. Member States are required to prevent the formation of packaging waste and to develop packaging reuse systems, which reduce their impact on the environment.	Waste, Material Assets

Lincolnshire County Council Joint Municipal Waste Management Strategy
Strategic Environmental Appraisal Scoping Report

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
Waste Electrical and Electrical Equipment Directive (2002/96/EC)	10, 11	The directive aims to minimise the impact of electrical and electronic goods on the environment. It looks to increase re-use and recycling of waste electrical and electronic goods by also reducing the amount going to landfill. It seeks to achieve this by making producers responsible for financing the collection, treatment, and recovery of waste electrical equipment, and by obliging distributors to allow consumers to return their waste equipment free of charge.	Waste, Material Assets
Industrial Emissions Directive (2010/75/EU)	10, 11	The intention of the Directive is to provide a consistent, best available technique (BAT) based approach to the regulation of waste treatment techniques which can be used both for disposal and for recovery and which have the potential to cause environmental damage if they are not appropriately controlled.	Waste, Material Assets
Waste Incineration Directive (2000/76/EC)	10, 11	Aims to prevent or limit as far as practicable the negative effects of waste incineration on the environment, in particular pollution by emissions into air, soil, surface water and groundwater and the resulting risks to human health, from the incineration and co-incineration of waste.	Waste, Material Assets
Directive on Batteries (2006/66/EC)	10, 11	A new Directive on batteries was published in September 2006 includes the UK. The original batteries Directive (91/157/EEC) only covered consumer batteries containing mercury, lead, and cadmium above a certain threshold level. The new directive will require collection schemes (financed by battery manufacturers) to be set up, and these will need to collect 25% of household batteries by September 2012 and 45% by September 2016. The UK is currently recovering less than 1% of household batteries.	Waste, Material Assets
The IPPC Directive, concerning integrated pollution prevention and control (2008/1/EC)	3, 5, 6, 7, 8, 9	To prevent, reduce and eliminate pollution at source through the efficient use of natural resources. It is intended to help industrial operators move towards greater environmental sustainability. It sets standards and target dates for reducing concentrations of fine particles, which together with coarser particles known as PM10 already subject to legislation, are among the most dangerous pollutants for human health.	Air Quality, Population and Human Health

Lincolnshire County Council Joint Municipal Waste Management Strategy
Strategic Environmental Appraisal Scoping Report

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
Directive 1966/62/EC on ambient air quality and management	3, 5, 6, 7, 8, 9	Establishes mandatory standards for air quality and sets limits and guide values for sulphur and nitrogen dioxide, suspended particulates and lead in air.	Air Quality, Population and Human Health
Directive 2008/50/EC on ambient air quality and cleaner air for Europe	3, 5, 6, 7, 8, 9	This directive establishes new air quality objectives for PM2.5 (fine particles), the possibility to discount natural sources of pollution and for time extensions of PM10 or up to five years (NO2, benzene) for complying with limit values, based on conditions and the assessment by the European Commission.	Air Quality, Population and Human Health
Green Paper: A European strategy for sustainable, competitive and secure energy (2006)	1, 2	Commission proposes a common European energy policy which will enable Europe to face the energy supply challenges of the future and the effects these will have on growth and the environment. This document aims to strike a balance between economic development and the quality and safety demands made by society in order to develop a modern, sustainable transport system for 2010.	Climatic Factors
European Landscape Convention 2000	12	The European Landscape Convention introduced the concept of “landscape quality objectives” into the protection, management and planning of geographical areas. Members of the council noted that the landscape has an important public interest role in the cultural, ecological, environmental and social fields, and constitutes a resource favourable to economic activity and whose protection, management and planning can contribute to job creation. It also noted that developments in agriculture, forestry, industrial, mineral production techniques, in regional planning, town planning, transport, infrastructure, tourism, recreation and, at a more general level, changes in the world economy are in many cases accelerating the transformation of landscapes.	Cultural Heritage

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
EC Sustainable Development Strategy Revision (2005)	All	<ul style="list-style-type: none"> • Combat climate change • Ensure sustainable transport • Address threats to public health • Manage natural resources more responsibly and stop biodiversity decline • Combat poverty and social exclusion • Meet the challenges of an ageing population 	General
Nitrates Directive (91/676/EEC)	4, 5, 6, 7, 8, 9	Prevention of eutrophication and water pollution Human health and ecosystem protection. Nitrate Vulnerable Zones (NVZs) designated in vulnerable sites.	Soil, Population and Human Health
National			
Government Review of Waste Policy in England 2011		<p>This Government review sets out 13 commitments to progress towards a zero waste economy. It prioritises efforts to manage waste in line with the waste hierarchy and reduce the carbon impact of waste.</p> <p>As part of a more sustainable approach to the use of materials, delivering environmental benefits and supporting economic growth, the review aims to:</p> <ul style="list-style-type: none"> • Prioritise efforts to manage waste in line with the waste hierarchy and reduce the carbon impact of waste; • Develop a range of measures to encourage waste prevention and reuse, supporting greater resource efficiency; • Develop voluntary approaches to cutting waste, increase recycling, and improve the overall quality of recyclate material, working closely with business sectors and the waste and material resources industry; • Consult on the case for higher packaging recovery targets for some key materials; • Support energy from waste where appropriate, and for waste which cannot be recycled; • Work to overcome the barriers to increasing the energy from waste which Anaerobic Digestion provides, as set 	

Lincolnshire County Council Joint Municipal Waste Management Strategy
Strategic Environmental Appraisal Scoping Report

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
		<p>out in the new AD strategy;</p> <ul style="list-style-type: none"> • Consult on restricting wood waste from landfill and review the case for restrictions on sending other materials to landfill. <p>To improve the service to householders and businesses while delivering environmental benefits and supporting growth the review aims to:</p> <ul style="list-style-type: none"> • Support initiatives which reward and recognise people who do the right thing to reduce, reuse and recycle their waste; • Work with councils to increase the frequency and quality of rubbish collections and make it easier to recycle; • Encourage councils to sign the new Recycling & Waste Services Commitment, setting out the principles they will follow in delivering local waste services; • Protect civil liberties by stopping councils from criminalising householders for trivial bin offences, while ensuring that stronger powers exist to tackle those responsible for flytipping and serious waste crime; • Support councils and the waste industry in improving the collection of waste from smaller businesses; • Reduce the burden of regulation and enforcement on legitimate business, but target those who persistently break the law. 	
The Waste (England and Wales) Regulations 2011		The Waste Regulations transpose the revised WFD into national law and they seek to ensure that the waste hierarchy is implemented – prevention, preparing for reuse, recycling, other recovery and disposal.	
Waste (England and Wales) (Amendment) Regulations 2012		The amended regulations relate to the separate collection of waste. They amend the Waste (England and Wales) Regulations 2011 (above) by replacing regulation 13. From 1 January 2015, waste collection authorities must collect waste paper, metal, plastic and glass separately. The amendment also imposes a duty on waste collection authorities, from that date, when making arrangements for the collection of such waste, to ensure that those arrangements are by way of separate collection.

Strategic Environmental Appraisal Scoping Report

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
Environmental Protection Act 1990		The Environmental Protection Act provides the structure and authority for waste management and the control of emissions into the environment.	
The Natural choice – Securing the Value of the Nation (2011, Defra)		<p>This document seeks to promote the valuing of the natural environment for the social and economic benefits it brings. Defra are seeking to mainstream the value of nature across our society by:</p> <ul style="list-style-type: none"> • facilitating greater local action to protect and improve nature; • creating a green economy, in which economic growth and the health of our natural resources sustain each other, and markets, business and Government better reflect the value of nature; • strengthening the connections between people and nature to the benefit of both; and • showing leadership in the European Union and internationally, to protect and enhance natural assets globally. 	
The Site Waste Management Plans Regulations (2008)	10, 11	<p>This Regulations require any construction project in England costing over £300k (be it for new build, maintenance, alteration or installation/removal of services such as sewerage, water) will need a Site Waste Management Plan (SWMP). A SWMP sets out how building materials, and resulting waste, is to be managed during the project.</p> <p>The SWMP's purpose is to ensure that: building materials are managed efficiently; waste is disposed of legally; and that material recycling, reuse and recovery is maximised.</p> <p>It is the client's responsibility to ensure a SWMP is written, followed, and updated during the project. Although the plan needs to be written at the construction design stage, it is a requirement of the SWMP regulations to maintain it during the whole project. Therefore, the client (or principal contractor) is also responsible for updating the plan with the site day to day activity. There will be two types of SWMP depending on the cost of the project:</p> <ol style="list-style-type: none"> 1. A project costing between £300 - £500k will follow a basic template 2. Anything over £500k will require a much greater level of detail. 	Material Assets, Waste

Lincolnshire Minerals and Waste Development Framework Preferred Minerals and Waste Strategies, June 2010		<p>The preferred strategic objectives of the Minerals and Waste Core Strategy are as follows:</p> <ul style="list-style-type: none"> • Protect the environment and local communities from negative impacts of minerals and waste development, reduce residual impacts and deliver improvements where possible. Ensure new facilities include high standards of design and layout, good working practices and environmental protection measures; • Ensure that the minerals extracted in Lincolnshire supply the construction industry in line with national and regional guidance and contribute to local, regional and national requirements; • Ensure, where possible, that minerals are supplied from appropriately located and environmentally acceptable sources; • Aim to minimise greenhouse gas emissions by reducing the reliance on landfill; maximising opportunities for the re-use 	Waste

Plan, Policy Programme	SEA Framework Objectives relevant to PPP	Aims and Objectives	SEA Topic
		<p>and recycling of waste; encourage new technologies to maximise the renewable energy potential of waste as a resource; and promote the use of carbon capture technology;</p> <ul style="list-style-type: none"> • Identify adequate capacity for managing waste more sustainably; encourage the re-use of previously developed land; and promote self sufficiency in Lincolnshire to ensure waste is managed as near as possible to where it is produced; • Safeguard key mineral resources from sterilisation by other forms of development and ensure that where non-mineral development must take place within Minerals Safeguarding Areas full consideration is given to prior extraction of the mineral resource; • Ensure efficient use of primary minerals and encourage the production and use of good quality secondary and recycled aggregates; • Protect Lincolnshire’s high quality agricultural land (Grades 1, 2 and 3a) from development which would permanently reduce production levels; • At the cessation of mineral working, after-uses will be identified which best meet local circumstances. The enhancement of existing, and the creation of new biodiversity habitats, and green infrastructure will be key objectives; • Ensure the unique historical heritage of Lincolnshire, including its built, archaeological and landscape features are protected from the adverse impacts of mineral and waste developments; • Ensure that local sources of building stone are available to contribute towards the maintenance and enhancement of locally distinctive buildings. Stone for Lincoln Cathedral will be specifically protected. • Protect Lincolnshire’s coastal and fluvial high flood risk areas from inappropriate minerals and waste development and reduce flood risk through development opportunities wherever possible; • Protect and enhance the AONB, coastline and other nature conservation areas ranging from International (Natura 2000 sites) through to local designations; • Wherever practicable, vehicular movements will be minimised and alternative modes of transport will be promoted.

General, Population and Human Health, Economic, Transport, Air, Water

10 Appendix B - Baseline Data

Set out below is the detailed baseline data review, that has been conducted to inform the SEA of the JMWMS.

10.1 Climatic Factors

10.1.1 Relevance to JMWMS

Waste management decisions have the potential to impact on Lincolnshire's Greenhouse Gas (GHG) emission levels, in particular through the operation of waste management processes which have a significant transportation element. This strategy promotes kerbside residual, recycling and garden waste collections, both of which rely on regular collections.

10.1.2 Overview - Greenhouse Gas (GHG) Emission Levels

According to statistics² released by the Department of Energy and Climate Change, in 2012, UK emissions of the six GHGs covered by the Kyoto Protocol were provisionally estimated to be 571.6 million tonnes (Mt) carbon dioxide equivalent (MtCO₂e). This represents a 3.5% increase on the 2011 figure of 552.6 MtCO₂e. The most abundant GHG is carbon dioxide (CO₂), which accounted for about 83% of the total UK greenhouse gas emissions in 2011, the latest year for which final results are available. In 2012, UK net emissions of CO₂ were provisionally estimated to be 479.1 Mt. This was 4.5% higher than the 2011 figure of 458.6 Mt. Figure 10-1 shows UK emissions of GHGs and CO₂ since 1990. Overall levels of the six Kyoto Protocol GHGs have decreased from 1990 levels.

Provisional estimates show increases in emissions of 5.5% (9.9Mt) from the energy supply sector, 11.8% (7.8 Mt) from the residential sector, and 4.8% (3.6Mt) from the business sector. Emissions from the transport sector were down by 1.2% (1.4Mt) from 2011.

Figure 10-1 UK emissions of greenhouse gases, 1990-2013 (provisional)

Source

ce: DECC, 2013. (Statistical Release - 2012 UK Greenhouse Gas Emissions, Provisional Figures and 2011 UK Greenhouse Gas Emissions Final Figures by Fuel Type and End-User).

On a regional scale, the latest available data³ released for 2011 shows that total end user CO₂ emissions in the East Midlands region is 34 Mt, with 7.4t per capita. This represents a significant decrease in the region when compared to figures produced in 2005, which showed 40 Mt total emissions and 9.3 t per capita.

In comparison with regional figures, Lincolnshire's CO₂ emission levels are lower; producing 4.7 Mt total emissions at 6.5 t per capita in 2011. In line with regional figures, CO₂ emission levels have reduced from 2005 levels of 5.4 Mt total emissions and 8.0t per capita.⁴

10.1.3 Lincolnshire's capabilities to reduce emissions

In Lincolnshire there is significant potential to generate energy from renewable sources, particularly using wind, the tides and biomass. Since 2004, the generation of energy from renewable sources within the county has been increasing steadily. There is a significant number of wind turbines with more planned. However, LCC is questioning this as an approach across Lincolnshire as, although supportive of alternative energy supplies for the future, Councillors question the effectiveness of wind farm technology, and are concerned about the visual impact for residents and on tourism in the county.⁵

LCC has been proactive in seeking to reduce emissions through the use of biomass, which is carbon neutral, to produce energy. The Lincolnshire Green Heat Scheme (LIGHT) works on the principle that burning biomass is 'Carbon Neutral' and does not contribute to global warming and can provide a cost effective way of reducing

CO₂ emissions. It is renewable because trees and crops are replanted after they are harvested. The energy in one tonne of wood-fuel is equivalent to over 300 litres of oil (65 gallons) or 3500 units (kWh) of gas or electricity.⁶

In 2011, 4,677.7 kilo tonnes (4.7 Mt) of CO₂ emissions were released in Lincolnshire, which represented approximately a 4% decrease since 2009. In 2011, the total emissions in kt CO₂ per sector were as followsⁱ:

- 1,416.8 kt from domestic sources
- 1,654.2 kt from industrial and commercial sources
- 1,477.4 kt from road transport.

Table 10-1 shows emissions for each local authority in the Lincolnshire between 2009 and 2011.

Table 10-1 CO₂ Emission for Local Authorities in Lincolnshire

Authority	Year	Industry and Commercial kt CO ₂	Domestic kt CO ₂	Road Transport kt CO ₂	Total kt CO ₂	Population ('000s mid-year estimate)	Per Capita Emissions t
South Kesteven District Council	2009	397.3	272.5	328.2	1030.3	132.2	7.8
	2010	413.5	294.9	333.2	1072.2	133.1	8.1
	2011	389.1	261.0	330.1	1011.1	134.1	7.5
West Lindsey District Council	2009	180.7	205.7	232.3	654.5	88.6	7.4
	2010	185.4	224.5	230.8	674.0	89.4	7.5
	2011	174.0	296.4	230.3	634.5	89.4	7.1

Total CO₂ emissions were highest in the South Kesteven District, which accounted for 1011.1kt CO₂, and the lowest emissions were in Boston Borough with 406.1kt CO₂. All local authorities showed reductions in their total emissions between 2009 and 2011.

The highest per capita emission in 2011 was 7.5t in the South Kesteven District and the lowest per capita emissions was 4.7t in Lincoln City.

10.1.4 *Climate Change Implication for Lincolnshire*

Climate change is predicted to result in more extreme weather events, increased temperatures and rises in the sea level which will be accompanied by economic, social and environmental impacts. Some of the potential implications of climate change for Lincolnshire are discussed in the following sections and will need to be taken into consideration within the JMWMS.

10.1.5 *Climate Change and Agriculture*

Lincolnshire has some of the highest quality agricultural land in the UK and is the most productive county for wheat, oil seed rape, cereals, poultry, and horticulture especially field vegetables (leeks, broccoli, cauliflower and cabbages) and bulbs. Lincolnshire has 39% of land which is at or below sea level putting many coastal areas at risk of coastal flooding. Much of this land is grade 1 arable farming land and any salt intrusion could take up to 40 years for the land to recover. It is therefore very important that LCC addresses and prepares for a changing climate.

The increased coastal erosion and flooding that is likely to be associated with climate change has the potential to decrease the quality and availability of agricultural land in the region, with the potential for impacts to the economy and food supply.

It is likely that some crops could no longer be grown in the area. However, there may be opportunities to grow different crops and the longer growing seasons may lead to higher yields and more locally grown produce throughout the year. There may be more opportunities for vineyards and for growing lavender, sweetcorn, grain maize, sunflowers and navy beans. Additionally there may be an increased potential for

planting crops for energy production. These changes in crops however will also have implications for biodiversity.⁷

Additionally, climate change is likely to result in an increased threat of pests and new crop pests such as the Colorado Beetle and the European Corn Borer.

10.1.6 *Climate Change, Transport and Infrastructure*

The East Midlands and Lincolnshire contain a number of important national transport links and ports which could be affected by climate change. Built structures such as bridges, promenades, pylons, roads and railway lines will become more vulnerable to higher winds, flooding, storm events and changes in soil moisture.

Some roads, particularly those near to the coastline and rivers will be particularly susceptible to an increased risk of flooding. Consideration will need to be given to the need to develop the capability of the carriageway to cope with excess water given the likely increase in the frequency of intense rainfall events. Railways will also be susceptible to flooding.

Temperature changes also have the potential to affect roads, by causing more frequent melting of the asphalt road surface, and railways by increasing the risk of buckling on the rail tracks.

Additionally, climate change has the potential to affect emergency services as a result of extreme weather events.

10.1.7 *Key Issues – Climatic Factors*

Set out below in Table 10-2 are the key issues that can be identified from the baseline data collected in terms of climatic factors.

Table 10-2 Key Issues: Climatic Factors

Key Issues – Climatic Factors
CO ₂ emissions are lower in Lincolnshire than in the East Midlands region in 2011. This figure has reduced from levels recorded in 2005.
Renewable energy proposals have increased although the visual impact of these measures is being questioned.
Climate change could have potential impacts on Lincolnshire's coastal areas, agricultural areas and transport infrastructure.

10.2 **Air Quality**

10.2.1 *Relevance to JMWMS*

The JMWMS will need to consider any impacts of operational processes on air quality, particularly due to the nature of waste collections which rely on vehicles and the transport network. Furthermore, the effects of composting may have an impact on air quality which will need to be assessed accordingly.

10.2.2 *Air Quality Management*

⁷ East midlands Regional Climate Change Partnership 2000

As part of the National Air Quality Strategy (NAQS), all local authorities obliged to establish air quality levels in their area that meet national air quality objectives. These are set by concentrations of airborne pollutants considered to be acceptable for health and the environment. If an area does not meet these objectives Air Quality Management Areas (AQMA) are declared. The authority must then draw up an Air Quality Action Plan to set objectives for improving air quality.

Although air quality across the county is generally considered to be good there are 6 AQMAs in Lincolnshire, declared primarily as a result of pollution caused by traffic emissions. Lincoln City Council has 2 AQMAs, Boston Borough Council has 2 AQMAs and South Kesteven District Council has 2 AQMAs. These are detailed in Table 10-3 below.

Table 10-3 Lincolnshire AQMAs

Local Authority	Pollutants Declared	Description
Lincoln City Council	Lincoln AQMA	The area generally follows the major road network in the City Centre and arterial routes and is primarily due to road traffic emissions.
	Lincoln PM ₁₀ AQMA - Nitrogen Dioxide (NO ₂)	An area encompassing the whole borough.
Boston Borough	Boston AQMA - Sulphur dioxide (SO ₂)	The AQMA follows the A16 trunk road through the centre of town encompassing properties on either side. It extends from Queen Street roundabout through to the intersection of John Adams Way and Main Ridge East.
	Bargate Bridge AQMA - Nitrogen dioxide NO ₂	An area from Bargate roundabout extending east in to the top part of Spilsby Road and incorporating the junctions of Freiston Road and Willoughby Road, Boston.
South Kesteven DC	Nitrogen dioxide NO ₂	Area incorporating Brooke St. and Manthorpe Rd, Grantham.
	Nitrogen dioxide NO ₂ and Particulate Matter PM ₁₀	No.1 - An area of land including residential properties along Wharf Road, Grantham, Lincolnshire. No.2 - An area of land including residential properties of Meres Road Grantham, Lincolnshire adjacent to the A1. No.3 - An area of land including residential properties of Welwyn Close, Rosemary Crescent and Denton Avenue, Grantham, Lincolnshire, adjacent to the A1. No.4 - An area of land including Rushmore Lodge at the junction of St. Paul's Street, Brazenose Lane and East Street, Stamford, Lincolnshire.

10.2.3 Key Issues – Air Quality

Set out below in Table 10-4 are the key issues that can be identified from the baseline data collected in terms of air quality.

Table 10-4 Key Issues: Air Quality

Key Issues – Air Quality
Air quality is considered to be good, although there are 6 AQMA's within the county, established primarily as a result of pollution from traffic emissions.

10.3 Geology and Soils

10.3.1 Relevance to JMWMS

Measures included within the JMWMS include proposals for the continued collection of green waste and composting. This has the potential to affect soil quality.

10.3.2 Overview

Soils and geology play an important part in determining the environmental character of an area. The nature and alignment of the rocks has a major influence on the landform. Rocks provide the parent material from which the soils are created and, through their constitution and chemistry, they influence the rate at which soils are formed. Soil chemistry and structure strongly influence the type of vegetation, which occurs naturally in an area.

10.3.3 Geology and Geomorphology

Lincolnshire's bedrocks form a simple pattern of north-south stripes at the surface. There are older Triassic rocks in the west, overlain progressively by marine Jurassic rocks and the younger Cretaceous rocks in the east. At the surface they have been subjected to weathering and erosion under a range of climates including glacial and periglacial during the last 2 million years.

The superficial geology of the county is blanketed with a covering of Quarternary superficial deposits that formed within the last two million years. The Quarternary deposits includes glacial and fluvioglacial deposits along with younger Flandrian silts, peat, sands and alluvium that cover the Fenlands, the coastal plains east of the Wolds, much of the Humber coast and the Isle of Axholme.

10.3.4 Soils

Lincolnshire contains a wide variety of soils including alluvium (clay, silt and sand) along coastal regions, Till (Diamicton), River Terrace deposits (Sand and Gravel), blown sand, peat, glacial sand and gravel.

Lincolnshire soils vary in thickness from a few centimetres to over a metre in response to the underlying geology, location in the landscape and agricultural practices. The thinnest soils tend to occur over chalk and limestone escarpments and on valley side, with the deepest soils in the Fenlands.

10.3.5 Key Issues – Geology and Soils

Set out below in Table 10-5 are the key issues that can be identified from the baseline data collected in terms of geology and soils.

Table 10-5 Key Issues: Geology and Soils

Key Issues – Geology and Soils
Lincolnshire contains a wide variety of soils that are used to support an important agricultural sector.

10.4 Population

10.4.1 Relevance to JMWMS

The JMWMS will need to consider the needs of the existing and future population of Lincolnshire, particularly in relation to promoting waste awareness. Waste management decisions may have potential impacts on transport networks and on the local economy.

Understanding local demographic trends is important in planning for the future of an area as it enables local authorities to predict the changing needs of the population and address them.

10.4.2 Population Structure and Statistics

Data released from the Office of National Statistics (ONS) 2012 mid-year population estimates (based on the 2011 census of population for England and Wales) is as presented below in Table 10-6.

DRAFT

Table 10-6 2012 Mid-Year Lincolnshire Population

Area	Mid-2012	Mid-2011	Mid-2002	Change 2011-2012		Change 2002-2012		Area Sq km	Density Persons per sq km, 2012
				Persons	%	Persons	%		
Lincolnshire CC	718,800	714,800	655,600	4,000	0.6	63,200	9.6	5,921	121
Boston	64,800	64,600	56,400	200	0.3	8,400	14.9	362	179
East Lindsey	136,600	136,700	132,100	-100	-0.1	4,500	3.4	1,760	78
Lincoln	94,600	93,100	85,700	1,500	1.6	8,900	10.4	36	2,650
North Kesteven	109,300	108,500	96,900	800	0.7	12,400	12.8	922	118
South Holland	88,500	88,400	77,900	100	0.1	10,600	13.6	742	119
South Kesteven	135,000	134,100	125,500	900	0.7	9,500	7.6	943	143
West Lindsey	90,000	89,400	81,100	600	0.7	8,900	11.0	1,156	78
England & Wales	56,567,800	56,170,900	52,602,100	396,900	0.7	3,965,700	7.5	151,013	375

The 2012 mid-year population estimates released by ONS show a continued increase in Lincolnshire's population. They show the county's total population increased by 63,200 people in ten years, to approximately 718,800 in 2012. This is a 9.6% rise and is higher than the percentage increase of 7.5% for England and Wales over the same period.

Across the districts, East Lindsey has shown the least rate of population growth at 3.4%, whereas Boston has the highest rate of population growth at 14.9% between the period of 2002 and 2012. A breakdown of the population data by age group and ethnicity shows that Lincolnshire continues to have an ageing population and is less ethnically diverse in comparison with the national figures. In terms of country of birth, Lincolnshire has a higher proportion of residents who were born in the EU than in England and Wales. In addition, Lincolnshire also has a higher proportion of UK born residents than in England and Wales. In terms of ethnicity, Lincolnshire has become more diverse with the non-white population making up 2.4% of the total population in 2011 compared to 1.4% in 2001. However this proportion is still small when compared with a national non-white population of 14%. Single person households aged over 65 make up nearly 14% of all households compared to 12% nationally. However, this is down 1% on 2001. Conversely the number of people stating that their day to day activities are limited due to their health has increased by 1% from 2001 to 20%. Nationally 18% of the population reported that this was the case.⁸

10.4.3 *Deprivation*

The Index of Multiple Deprivation (IMD), published by the Department for Communities and Local Government (DCLG), is a national dataset of deprivation indicators, chosen to cover a range of economic, social and housing issues, into a single deprivation score. They assess deprivation over small geographical areas that enable the extent and distribution of deprivation to be compared and monitored over time.

When comparing IMD data released in 2007 and 2010⁹, the following can be noted:

- all Lincolnshire's district council areas are ranked as being slightly more deprived in 2010 than in 2007; and,
- 12% of Lincolnshire's population live in areas categorised within England's 20% most deprived areas, an increase of 1% on 2007.

The IMD uses geographical areas called Super Output Areas (SOAs) to facilitate the calculation of the IMD, by using a set of areas of consistent size that do not change boundaries. Lower Super Output Areas (LSOAs) typically contain four to six SOAs.

The most deprived Lower Super Output Area (LSOA) in the county is in Lincoln and the least deprived is in North Kesteven at RAF Cranwell. From the 2010 figures, it can be seen that Lincolnshire now has 5 additional LSOAs that are ranked in England's top 20% most deprived areas, two in both East Lindsey and Lincoln, and one in West Lindsey.

10.4.4 *Economy*

Since April 2010, all unitary authorities and county councils have a statutory duty to carry out an assessment of the economic conditions of their area through a Local Economic Assessment (LEA). This is intended to provide local authorities and other stakeholders with a robust analysis of the local economy which can help shape actions to improve the local economy.

Lincolnshire is one of the largest and most sparsely populated areas of England and presents a distinctive range of challenges for organisations concerned with the socio-economic well-being of a low wage area experiencing sustained population growth.

The Economic and Development Strategy 2008-2010 identified five distinct economic and geographical areas each with their own characteristics within Lincolnshire and classified the areas as follows:

⁸ <http://www.research-lincs.org.uk/2011-census.aspx> [Accessed 26.06.2013]

⁹ <http://www.research-lincs.org.uk/Deprivation-and-Poverty.aspx>

- The expanding Greater Lincoln area - including Gainsborough - which is increasingly prosperous and is consolidating as a regional centre.
- The coastal strip - has significant levels of deprivation due to peripherality and seasonal employment.
- The Fenland area of the south east - has a strong and successful food and horticultural identity.
- The A1 corridor - is experiencing private sector led economic growth and still has significant untapped potential.
- The large central and traditional rural area - has a network of market towns in a historic agricultural setting.

Each area presents a different set of issues, and with the exception of greater Lincoln, the most distinctive characteristic is the commonality of rural issues.

Slow and low economic growth: Gross Value Added (GVA) is a very broad barometer of economic vitality and is used locally, regionally and internationally to make comparisons between areas. The consequences of a low-wage economy are a low GVA. Lincolnshire has one of the lowest GVAs in the country despite the growth in the local economy over the past few years.

In 2011, an LEA was undertaken which described Lincolnshire in terms of its economic profile and examined local data. This study developed thirteen economic zones to enable data analysis at a more local level and reflect areas where similar issues and opportunities are faced by the local population.

The LEA stated that GVA figures estimates the value of the county's economy at over £10bn for the first time. This however does not improve the economic performance of the county as it still remains one of the weakest and is generally regarded as a low skilled, low wage economy. Lincolnshire's economy is set to continue growing, however, without intervention, the positive projections will not be enough to move it closer to the national or regional rates of economic activity.¹⁰

The economic downturn had an impact on Lincolnshire's economy although less than was experienced in other parts of the country. A number of economic indicators highlight the resilient qualities of the local economy. An example is the county's unemployment rate which fell from 3.8% in January 2010 to 3.2% during April 2011, and has remained below both the regional and national rates. The overall employment rate in the county (72.7%) has remained above that of regional and national rates (71.2% and 70.3% respectively). Recruitment activities appear to have also recovered for some sectors since the economic downturn.

Despite the positive signs of economic recovery, many businesses and organisations in Lincolnshire continue to report difficult trading conditions with some operating at less than full capacity during 2010. The number of businesses per 10,000 of the population (400) is lower than the national rate of 420. The sparse nature of the county results in an average of only five businesses per km² compared to 17 nationally.

¹⁰ <http://www.research-lincs.org.uk/UI/Documents/Local%20Economic%20Assessment.pdf>
[Accessed 26.07.13]

There is also a clear rural/urban divide in the county on some issues including, transport, information and communications technology, levels of crime, skills and wages, and how communities access services.

The number of people of working age (16 to 64) in Lincolnshire during the mid-year 2012 population estimate was 441,500 and the percentage of claimants in working age population is 10.7%.¹¹ This figure is lower than the regional and national rates of 10.9% and 11.6% respectively¹². However, the International Labour Organisation’s (ILO) wider measure of unemployment shows that 6% of the county’s working age population are out of work.

10.4.5 Key Issues – Population

Set out below in Table 10-7 are the key issues that can be identified from the baseline data collected in terms of population and human health.

Table 10-7 Key Issues: Population

Key Issues – Population
The population of Lincolnshire has increased by 63,200 people in the ten year period to 2012. A breakdown of this data shows that the county continues to have an ageing population and is less diverse than other areas.
Deprivation across Lincolnshire has worsened slightly from 2007 to 2010.
The economy of Lincolnshire has not been affected in the economic downturn to the extent that has occurred nationally. However, many businesses have reported difficult trading conditions.

10.5 Material Assets

10.5.1 Relevance to JMWMS

Waste management decisions may impact on material assets, related to transport and social infrastructure, such as hospitals, residential areas etc. How these facilities deal with their waste has a significant bearing on the success of the JMWMS.

10.5.2 Overview

For the purpose of this SEA ‘material assets’ refers to the critical infrastructure, waste management facilities and housing within the borough that could be potentially affected by the implementation of the JMWMS.

10.5.3 Critical Infrastructure

Critical infrastructure comprises ‘those facilities, systems, sites and networks necessary for the functioning of the country and the delivery of the essential services upon which daily life depends’.¹³ The implementation of the JMWMS measures has the potential to disrupt critical infrastructure such as utilities (e.g. clean water, electricity supply, telecoms network), access to community care facilities (hospitals or health centres). The JMWMS will seek to manage these risks to critical infrastructure and material assets within Lincolnshire. If the JMWMS requires the building of new infrastructure, it will also need to consider access to and use of critical infrastructure.

10.5.4 Transport

¹¹ <http://www.research-lincs.org.uk/Local-Economic-Assessment.aspx#data> [Accessed 26.07.13]

¹² <http://www.nomisweb.co.uk/reports/lmp/la/1941962809/report.aspx#tabwab> [Accessed 26.07.13]

¹³ <http://www.cpni.gov.uk/about/cni/> [Accessed 30.07.13]

Lincolnshire is a predominantly rural county and as a consequence of its size, the highway network is extensive totalling about 8,905 km (5,534 miles). LCC is responsible for the 5th largest road network in England covering 5,500 miles with 85% classified as rural, 3,030 miles of footway and over 3,500 highways structures.¹⁴ LCC is the highway authority for all public roads except trunk roads. Within this network there is no motorway and just 41m of dual carriageway of which the A1 and the recently upgraded A46 between Newark and Lincoln form the majority.

Figure 10-2 Lincolnshire's Transport Network

Traffic counts¹⁵ for Lincolnshire, taken by the Department for Transport, show that in 2012 vehicles travelled 2,370,641 thousand miles which is broken down as follows:

¹⁴ <http://www.lincolnshire.gov.uk/residents/transport-travel-and-roads/highway-maintenance/lincolnshire-county-council-highways-alliance> [Accessed 29.07.13]

- Motorcycles – 19,530
- Cars – 1,788,669
- Buses and Coaches – 14,560
- Light Goods Vehicles – 333,317
- HGV's – 214,599

It is apparent that the predominant mode of transport in the county is the car with the proportion of HGV's (commonly used to transport waste) making up 9% of the total thousand miles.

Lincolnshire's recently published fourth Local Transport Plan (LTP4)¹⁶ identifies the current issues around transport in the county. The LTP4 recognises that there is increasing demand on the road network and at the same time concerns around the environmental impact of transport continue to grow. Three key challenges have been identified which are as follows:

- Supporting growth and the local economy
- Improving access to employment, training and key services, and
- Contributing to a healthier community.

The LTP4 recognises that increasing development in the county will put pressure on transport networks. LCC, as highways authority, is working alongside its constituent district councils on preparing appropriate Infrastructure Development Plans (IDPs) in support of the Local Plans. However, within the current economic climate, delivering appropriate transport infrastructure will be challenging and a range of funding sources will need to be explored.

The LTP4 outlines LCC's commitment to reducing the environmental impact of transport. LCC has ongoing initiatives around reducing carbon emissions, using alternative fuels and reducing the impact of traffic through reduction of speeds and re-routing traffic.

10.5.5 *Public Rights of Way*

There are no national trails within Lincolnshire. However, the Viking Way is a long distance footpath which runs for 235km from the Humber Bridge at Barton-upon-Humber to Oakham in Rutland. There are a number of national cycle routes within the county including national route 1 which runs through Boston, Lincolnshire, and Market Rasen. There are other schemes including a cycleway from Newark to Lincoln and a town centre scheme in Grantham. There is a network of over 4000km of public rights of way in Lincolnshire, including public footpaths, bridleways and byways.

10.5.6 *Waste*

Lincolnshire disposes of a range of waste streams: municipal waste; waste generated by industry, commerce and business; waste from construction and demolition activities; and other more specific waste types such as hazardous waste, agricultural waste, waste water and sewage sludge.¹⁷ Over 3 million tonnes of waste is produced each year and a large percentage of this ends up in landfill.¹⁸ The total municipal solid waste (MSW) arisings in Lincolnshire between 2010 and 2011 was 355,609 tonnes. Data shows that the average rate of change yearly between 2000/01 to 2010/11 has remained at 1%. Municipal waste arisings in the County is currently forecasted to grow at a rate of 1.7% per annum from the 2010/11 figure of 355,609 tonnes over the next 20 years until 2030/11. It is also assumed that that 55% of the total arisings is recycled and composted (with a ratio of 32% and

¹⁵ <http://www.dft.gov.uk/traffic-counts/area.php?region=East+Midlands&la=Lincolnshire>

¹⁶ <http://www.lincolnshire.gov.uk/residents/transport-travel-and-roads/transport-planning-and-development-control/local-transport-plan/4th-lincolnshire-local-transport-plan/102070.article?tab=downloads>

¹⁷ Preferred Minerals and Waste Strategies, 2010. [Lincolnshire Council]

¹⁸ <http://www.lincolnshire.gov.uk/recycle-for-lincolnshire/waste-local-plan/> [Accessed 30.07.13]

23% of total arisings, respectively), and that by 2013/14 150,000 tonnes per annum is recovered via the energy from waste facility at North Hykeham.¹⁹

Lincolnshire is in the process of producing their Minerals and Waste Development Framework, which is a new set of documents to replace the existing Mineral and Waste plans and will address future waste activities in the County.²⁰

Waste collection and disposal results in a substantial number of lorry movements into and out of the County to transport waste to recycling facilities, energy from waste facilities or landfill sites. Regular collections are required from households and with the number of households increasing and the amount of waste increasing; there will inevitably be an impact on transport.

It is essential to ensure that the JMWMS considers such issues regarding the increasing number of households and corresponding increases in waste generation and waste transportation to enable appropriate waste management across the County.

10.5.7 *Housing and Homes*

The issues of affordable housing will be addressed by the Local Planning Authorities, Local Development Framework Core Strategies and Site Allocations Development Plan Documents (DPD). Within these DPDs, new housing locations are identified as will new employment sites, it is essential that the JMWMS is integrated with the LDFs to ensure that development is located in areas that are not negatively impacted by the implementation of the strategy.

Lincolnshire is a growing county in terms of provision of new homes. The town of Grantham is a designated growth point, and here alone it is anticipated that 7,500 homes and 4,000 jobs will be created by 2026. Furthermore, within central Lincolnshire (City of Lincoln, North Kesteven and West Lindsey), the draft Core Strategy sets out plans to build 42,800 homes by 2031.

The JMWMS must ensure access to services is a high priority for new housing development within Lincolnshire, the SEA process provides an opportunity to ensure that these issues are fully addressed at the strategy options/alternatives appraisal stage.

10.5.8 *Agriculture*

The East Midlands is a very productive area for agriculture and contains a significant percentage of the total national resource of the best and most versatile agricultural land. The proportion of Grade 1, 2 and 3a agricultural land, i.e. the best and most versatile land, in the East Midlands is 47% compared to 39% across England. The East Midlands also contains a significant percentage (34%) of the total national resource of Grade 1 agricultural land. Within the region, over 1.2 million hectares of land is in agricultural use and the industry employs over 39,000 people across some 18,500 farms. Farming is a major industry in Lincolnshire, with a farmed area of 484,220ha, a total of 3,680 holdings and a labour force of 8,490 in 2010.²¹ Some of the highest grade agricultural land in the country is found in the south and east of the county, with 44% of the agricultural land in Lincolnshire being Grade 1 or Grade 2.

Lincolnshire is the largest producer of wheat in the UK; contributes over 10% of total national wheat production and over 50% to regional production. The split in produce on Lincolnshire's farms is shown in Table 10-8 below.

¹⁹ Lincolnshire County Council, Waste Needs Assessment, November 2012.

²⁰ <http://www.lincolnshire.gov.uk/residents/environment-and-planning/planning-and-development/minerals-and-waste/minerals-and-waste-sites/88170.article> [Accessed 30.07.13]

²¹ <http://appsso.eurostat.ec.europa.eu/nui/submitViewTableAction.do> [Accessed 30.07.13]

The JMWMS needs to consider protection of agriculture and the infrastructure required for transportation.

Table 10-8 Farming Produce

Type	Area / Number	Includes
Arable	383,729 ha	Cereals 2,328ha; potatoes 13,650ha; sugar beet 19,971ha; field beans 19,826ha, peas 5,290ha, oilseed rape 62,412ha, linseed 3,695ha, root crops 1,375ha
Horticulture	32,480ha	Peas and beans 11,329ha; other veg and salad 19,067ha; fruit 152ha; bulbs and flowers 1,620ha
Livestock	3,227,858 No.	Cattle 87,814; pigs 174,722; sheep 144,789; goats 1,024; horses 4,760; poultry 12,945,060

10.5.9 Key Issues – Material Assets

Set out below in Table 10-9 are the key issues that can be identified from the baseline data collected in terms of material assets.

Table 10-9 Key Issues: Material Assets

Key Issues – Material Assets
There is an extensive highway network in Lincolnshire. In recent years the length of trunk roads has reduced dramatically as a result of the detrunking of several A roads.
Increasing demand on the transport network and an increase in concern around the environmental impact of traffic.
Waste collection and disposal results in a substantial number of lorry movements into and out of the County to waste management facilities. Regular collections are required from households and with the number of households increasing and the total amount of waste increasing; there is the potential for an impact on transport.
Mineral extraction operations within the county will result in substantial lorry movements to transport materials.
New housing and employment sites are presently being identified across the county,
Lincolnshire contains a significant amount of best and most versatile agricultural land and is a large producer of food.

10.6 Cultural Heritage

10.6.1 Relevance to JMWMS

Waste management decisions may change the pattern and frequency of waste collections which may have a visual impact on areas of heritage value due to the equipment that may be required.

10.6.2 Overview

The term ‘cultural heritage’ covers buried archaeological remains which allow the study of past societies through the medium of material culture, and built heritage which is buildings and structures of heritage interest.

10.6.3 Lincolnshire’s Heritage Assets

Lincolnshire’s historic landscape and built environment reflects local topography, land use and the availability of building materials, and more recently changes in social conditions and technological advances. One of the

county's assets is the combination of styles and materials which represent the economic and aesthetic influences of different periods of history. This is reflected in the high historic and cultural value of the cores of Lincoln City and surrounding towns.

Some of the earliest archaeological remains include evidence of Palaeolithic inhabitation, other features include the prehistoric burial mounds of the Wolds, the waterlogged landscape of the Witham Valley, medieval castles and monasteries and the industrial and agri-industrial buildings of the towns and World War II sites and defences, the most important of which are designated Scheduled Ancient Monuments (SAMs). Lincolnshire has a small number of historic battlefield sites one of which, at Winceby, is registered.

There are a number of grant schemes supported by LCC which aim to repair historic buildings; these schemes include Townscape Heritage Initiative in Boston, Heritage Economic Regeneration Scheme in Burgh le Marsh, Tattershall, Woodhall Spa and Wragby, and Historic Buildings Grant Schemes throughout the county.

10.6.4 Conservation Areas

Conservation areas are designated for their special architectural and historic interest. They are normally centred on listed buildings and groups of other buildings, open space, or historic street patterns. Planning legislation requires that special attention shall be paid to the desirability of preserving or enhancing the character or appearance of the conservation area.

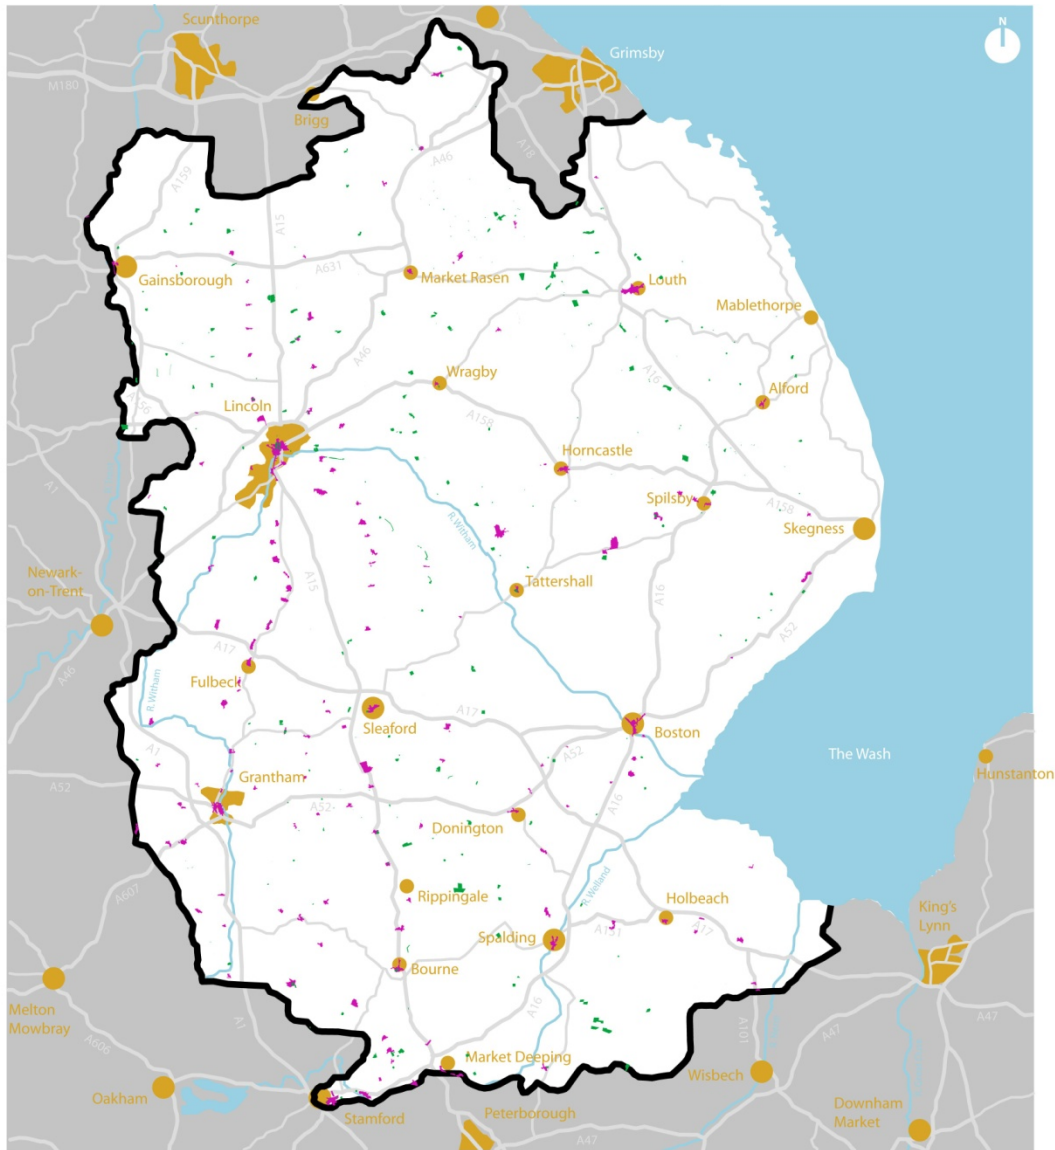

The district councils within the Lincolnshire boundary have recognised the importance of the man-made heritage; this is reflected in development plans which contain a number of policies which afford protection to the character and appearance of the historic built environment. Proposals for waste management developments impinging on conservation areas and listed buildings are expected to respect and enhance their surroundings in terms of appearance. For Lincolnshire as a whole there are 162 conservation areas,²² 7200 Listed Buildings,²³ and 478 Scheduled Ancient Monuments.²⁴ Lincolnshire's conservation areas and Scheduled Ancient Monuments are shown in Figure 10-3.

Figure 10-3 Lincolnshire's Conservation Areas and Scheduled Ancient Monuments

Lincolnshire County Council Joint Municipal Waste Management Strategy
Strategic Environmental Assessment Scoping Report

10.6.5 Historic Landscape Character zones

This wider historic landscape character is a fundamental aspect of the historic environment. The County of Lincolnshire has been assessed within the context of English Heritage’s *Historic Landscape Characterisation Programme*. The programme identified 42 Historic Character Zones within 10 broad Historic Landscape Types; these comprised:

- The Confluence
- The Northern Cliff
- The Northern Marshes
- The Wolds
- The Clay Vale

- The Trent Valley
- The Southern Cliff
- The Grazing Marshes
- The Fens
- The Wash

A complete list of the Historic Character Zones is available from English Heritage document ‘*The Historic Character of the County of Lincolnshire*’.²⁵

10.6.6 Key Issues – Cultural Heritage

Set out below in Table 10-10 are the key issues that can be identified from the baseline data collected in terms of cultural heritage.

Table 10-10 Key Issues: Cultural Heritage

Key Issues – Cultural Heritage
Lincolnshire has a large amount of heritage assets including 162 conservation areas, 7200 listed buildings and 478 scheduled ancient monuments across the county.
