

APPENDIX A

EXTRACT FROM NATURAL ENGLAND'S GREENING DEMENTIA PROJECT

The Natural England's Greening Dementia Project displays a collection of evidence, showing positive outcomes from people with dementia experiencing the Natural Environment which include:

- Improved emotional state: reduced stress, agitation, anger, apathy and depression
- Improved physical health: skin health, fitness, sleeping patterns, eating patterns
- Improved verbal expression
- Improved memory and attention
- Improved awareness: multi-sensory engagement and joy
- Improved sense of well-being, independence, self-esteem and control
- Improved social interaction and a sense of belonging

Carers of people with dementia suffer from stress and isolation. Providing the sensory strolls also delivers respite for the carers and enables them to socialise with people.
