

Agenda Item 5

LINCOLNSHIRE HEALTH AND WELLBEING BOARD – 28 SEPTEMBER 2021

CHAIRMAN'S ANNOUNCEMENTS

Pharmaceutical Needs Assessment (PNA) 2022

At the last Health and Wellbeing Board (HWB) meeting we received a report detailing the process and timescale for producing the next PNA. Since that meeting it has come to our attention that due to the ongoing demands of the pandemic on the health and care system, the Department of Health and Social Care have extended the temporary suspension of the assessment. This means that our next PNA is now not due to be published until October 2022. Revised PNA regulations and guidance, including an update on the process for renewing the document, are expected shortly. Work on Lincolnshire's PNA has therefore been put on hold and will restart in early 2022.

Population Health Management (PHM) Update

After a pause during the first part of the pandemic, the joint implementation of a PHM approach in Lincolnshire has progressed at pace. We have successfully joined wave 3 of the NHSE/I PHM Development Programme and, since January, partner organisations across the ICS have worked incredibly hard to put the data flows and information governance frameworks in place to create Lincolnshire's first ever record level, joined up, dataset across health and care. This pseudonymised data set includes activity within primary care, mental health services, community health services, hospital care, adult care and hospital waiting list data, with a 100% sign up from GP practices in the seven Primary Care Networks taking part in the first phase of the programme. These data will now be used to create new intelligence that crosses patient pathways and services provision.

From autumn, the programme will deliver a range of Action Learning Sets, which provide real opportunities to make changes in our system whilst developing skills and behaviours in utilising a PHM approach in decision making. Participants from across the ICS will take part in system leadership, analytics and intelligence, finance and place and primary care network workstreams, to develop our workforce at all levels, making positive changes in some of our shared priority areas between October 2021 and March 2022.

Health and Wellbeing Presentation to District Councils

The past 15 months has been an immensely challenging time for everyone, and Lincolnshire's multi agency response has been a particular strength in how we have managed the pandemic. With the easing of lock down the focus is now on how we live with the virus whilst focusing on recovery. With this in mind, in July, Derek Ward and I wrote to the Leaders and Chief Executives of the District Councils offering to meet their Executives and senior managers to talk about health and wellbeing in their district. We have sessions booked in with North and South Kesteven and hope to confirm dates with the other districts shortly.

Meeting with NHS Non-Executive Directors

Following the publication of further guidance on the Integrated Care System (ICS) in August, Debbie Barnes and myself met with NHS Non-Executive Directors (NEDs) on 16 September. The discussion focused on how the Health and Wellbeing Board and NEDs can strengthen relationships to work with wider partners in the system to develop a 'broader alliance of organisations concerned with improving health and wellbeing'.

Lincolnshire Partnership NHS Foundation Trust Chief Executive

I would like to congratulate Sarah Connery who has been appointed as the new substantive Chief Executive at LPFT. Sarah has been acting Chief Executive since October 2020 and was previously Director of Finance and Information.

LIVES Critical Care Car Launch

LIVES will be launching their brand-new Critical Care Car on 30 September 2021 at 6pm at the North Shore Hotel and Golf Club in Skegness. The car will operate along the East Coast to deliver enhanced care to patients who may be located over an hour away from their nearest major trauma centre. The car has highly trained medics on board, providing vital medical interventions to patients involved in serious incidents, including cardiac arrests, road traffic collisions and any other injury or illness that is deemed as life threatening.
